Notes:
Requires Further Action: A "False" identifier in this column indicates that no additional actions (e.g. additional investigation, detonation, quality control) for this anomaly are required. A "True" identifier in this column indicates that additional actions for this anomaly are required
UXO QC Complete: A "False" identifier in this column indicates that UXO QC was not completed for the specified anomaly. A "True" identifier in this column indicates that UXO QC was completed for the specified anomaly. UXO QC may remain "False" if the area including the anomaly received additional subsequent investigation (for example a sifting operations in a DGM target anomaly area). UXO QC for sifting anomalies consists of UXOQCS inspection of sifted material to ensure that UXO personnel are correctly sorting the material and UXOQCS management of blind seeds.

QC Final: A "False" identifier in this column indicates that one or all required QC activities were not completed for the specified anomaly. A "True" identifier in this column indicates that all required QC activities were completed for the specified anomaly. QC activities include, but are not limited to, UXO QC, and data entry review.

iOEModel ID: Indicates the model number assigned by the Army to the specific item type.

Standard: Indicates an item that is predominantly intact and for which there is an "iOEModel ID" in the Fort Ord Military Munitions Response Program Database.
