^a A qualitative estimate of abundance is based on the total number of California linderiella observed from 10 to 20 random samples (depending on size and complexity of each waterbody) collected with a dipnet from throughout each pool.

Abundance is defined as follows:
 "--" : None observed.
 Low: 1 to 10 linderiella observed.
 Moderate: 11 to 100 linderiella observed.
 High: 101 to 300 linderiella observed.
 Very high: more than 300 linderiella observed.
 NS : Not surveyed.
 NR : Survey not required.
