

Appendix C
Data from Investigation Activities

APPENDIX C DATA FROM INVESTIGATION ACTIVITIES

Appendix C lists the UXO and OE-scrap items encountered (by date) during the previous investigations in Ranges 43–48. This OE information has been compiled from the Fort Ord database, and Parsons has performed QC on this data.

It should be noted that the Maverick Road fuel break listed in Appendix B has been renamed Evolution Road and the Pipeline Road fuel break has been renamed Broadway Avenue (for the east-to-west section of Pipeline Road) and Orion Road (for the north-to-south section of Pipeline Road).

The large ('L') and medium ('M') grid designators that appear in the site map in Appendix B are not included in this OE listing (for example grid LC2MA7 on the site map appears as grid C2A7 in this OE listing). The Fort Ord Master Grid IDs are provided for items encountered during Grid Stats/Site Stats sampling ('G'-series grids).

The average and maximum recovery depths of the OE items included in Appendix C are listed in Table 5-1 (page 5-2).

UXO Items Encountered at Ranges 43-48

SITE	OPERATION	GRID	MASTER GRID ID	NAME	DATE	ORDNANCE	QTY
OE-15 R44	4 FT	05 A		Range 44	15-Apr-97	GRENADE, HAND, INCENDIARY, TH3, AN-M14	1

RE: Clarification to Appendix C Final After Action Report OE-15 MoCo and Seaside Sampling

Ms. Martinez,

USA has reviewed the emails discussing the data entry in Appendix C Table C-6 of the OE-15 MoCo and Seaside Sampling listed.

Grid	Date	Northing	Easting	Depth	Qty	Item Description
G 09	26-Apr-99	2123450	5742250	0		Projectile, 105mm, HE, M444 (Fragments) Expended

As the USA Project Manager at the time of the discovery of the item I recall discussions with project site personnel on whether the fragments could be an M444. The field personnel did believe they had enough information to make a determination of it's identification because of the shape of it's base but we do not have any photographic evidence to prove or disprove that statement.

It is true that the 105mm M444 projectile and the 105mm, Smoke HC, M84 Series are identical in size and shape and function, e.g. base ejection, just the cargo being different. I assume it could have been an M84 Series.

I know the decision point in 1999 for USA Environmental was the fragments obviously had to be from an intentionally destroyed item by U.S. Army personnel because both of these projectiles eject their cargo's and the projectile body stays intact. In my professional opinion no submunitions where ever used at Fort Ord. It was the policy of the U.S. Army to have specific ranges for submunitions use and U.S. Army personnel would not intentionally detonate a submunitions projectile on any range at Fort Ord.

This memorandum can be placed in published copies of the After Action Report as a clarification for this entry.

If you have any questions please contact me at (813) 884-5722 extension 104, DRALSTON@USATAMPA.COM

Sincerely,

Douglas D. Ralston
Project Manager
