MM = Military Munitions

in. = inches

MD = Munitions debris

UXO = Unexploded ordnance

The * in MM item description field means there is no equivalent Master Pick List nomenclature for the item, the nomenclature from the original grid sheet was used.

MM = Military Munitions

in. = inches

ISD = insufficient data

MD = Munitions debris

UXO = Unexploded ordnance

The * in MM item description field means there is no equivalent Master Pick List nomenclature for the item, the nomenclature from the original grid sheet was used.

MM = Military Munitions

in. = inches

DMM = Discarded Military Munitions

ISD = insufficient data

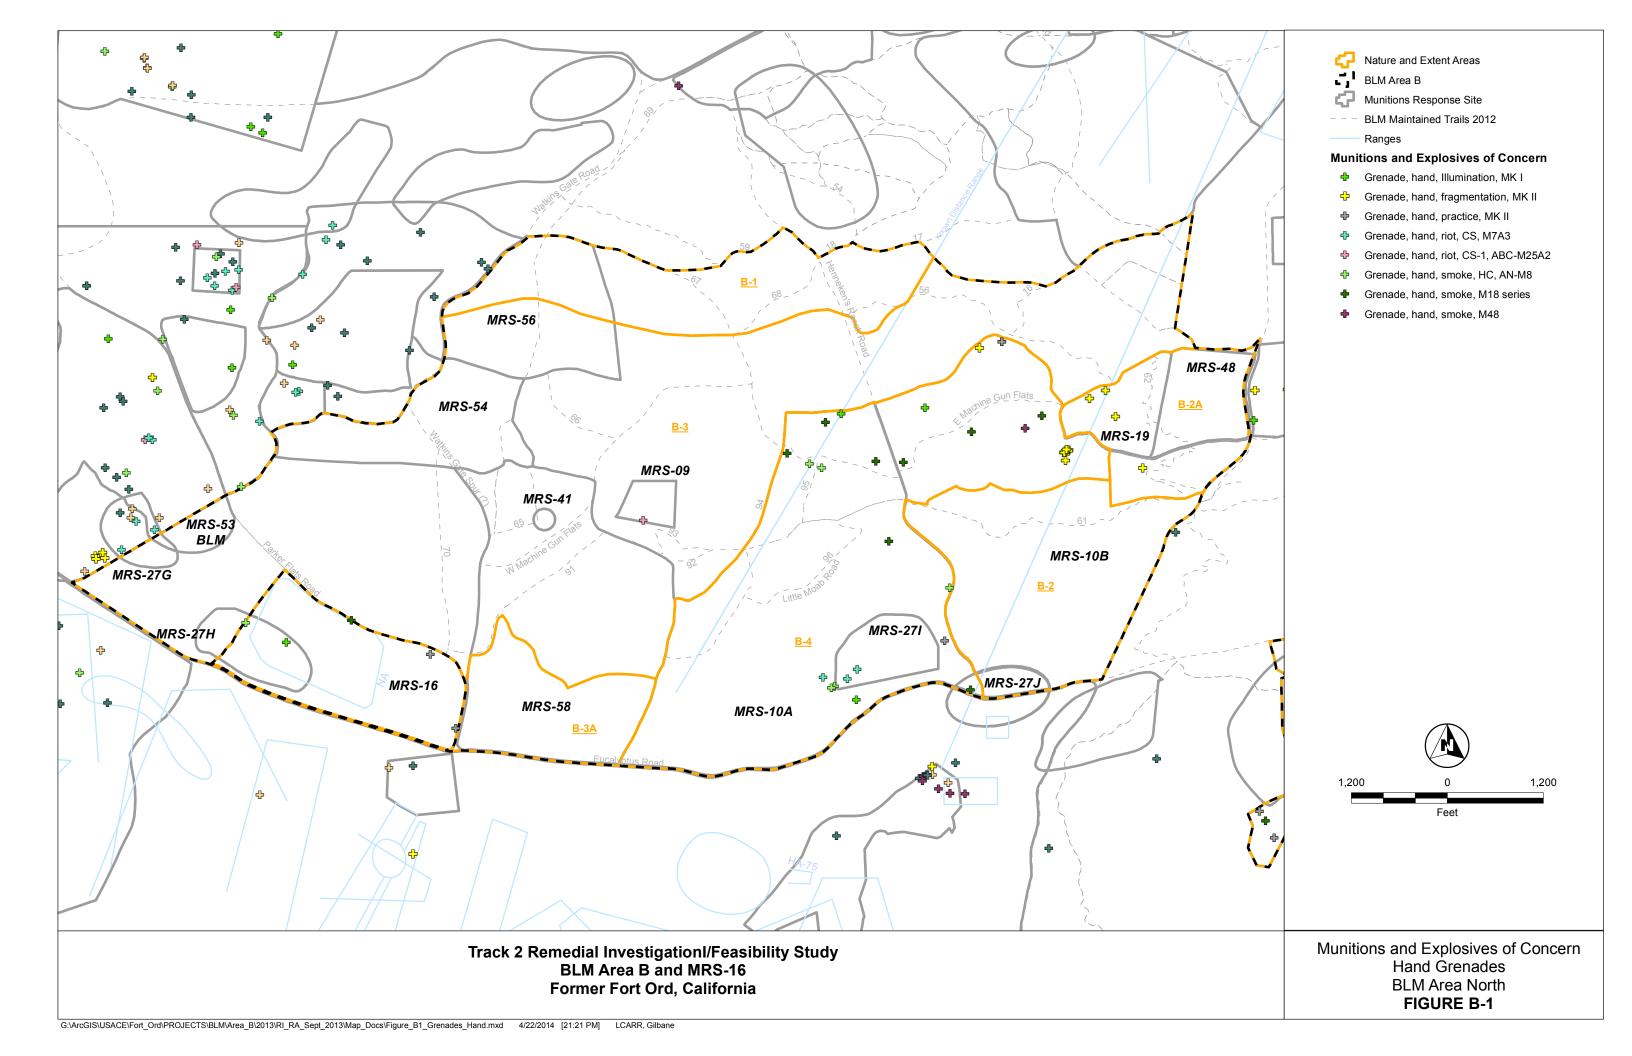

MD = Munitions debris

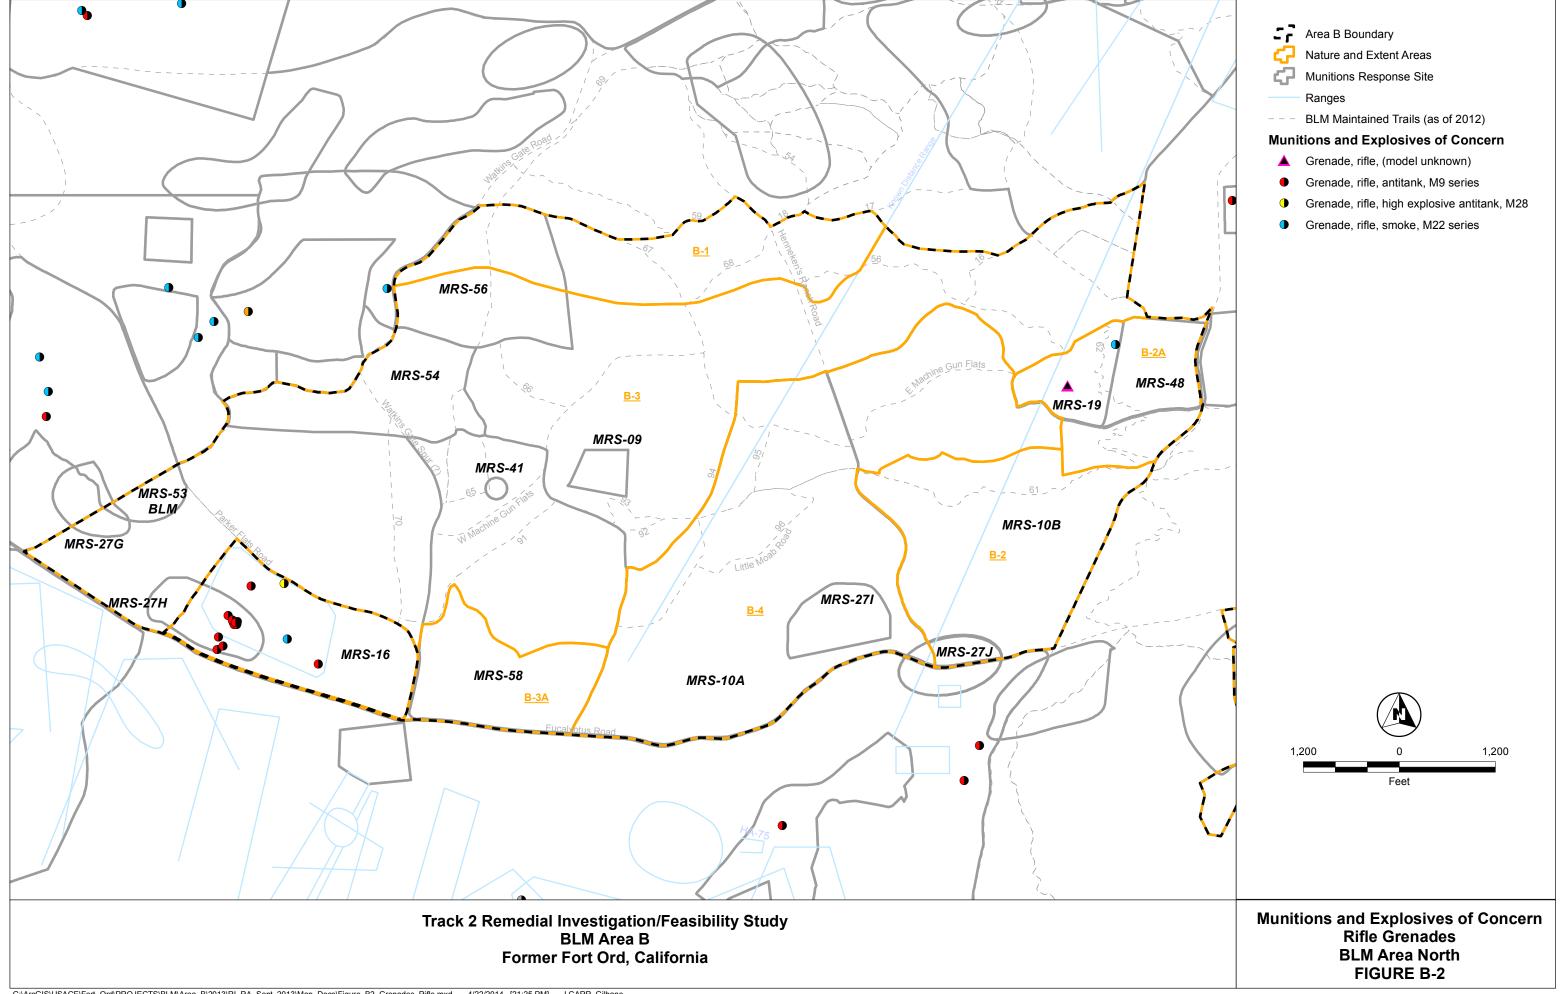

UXO = Unexploded ordnance

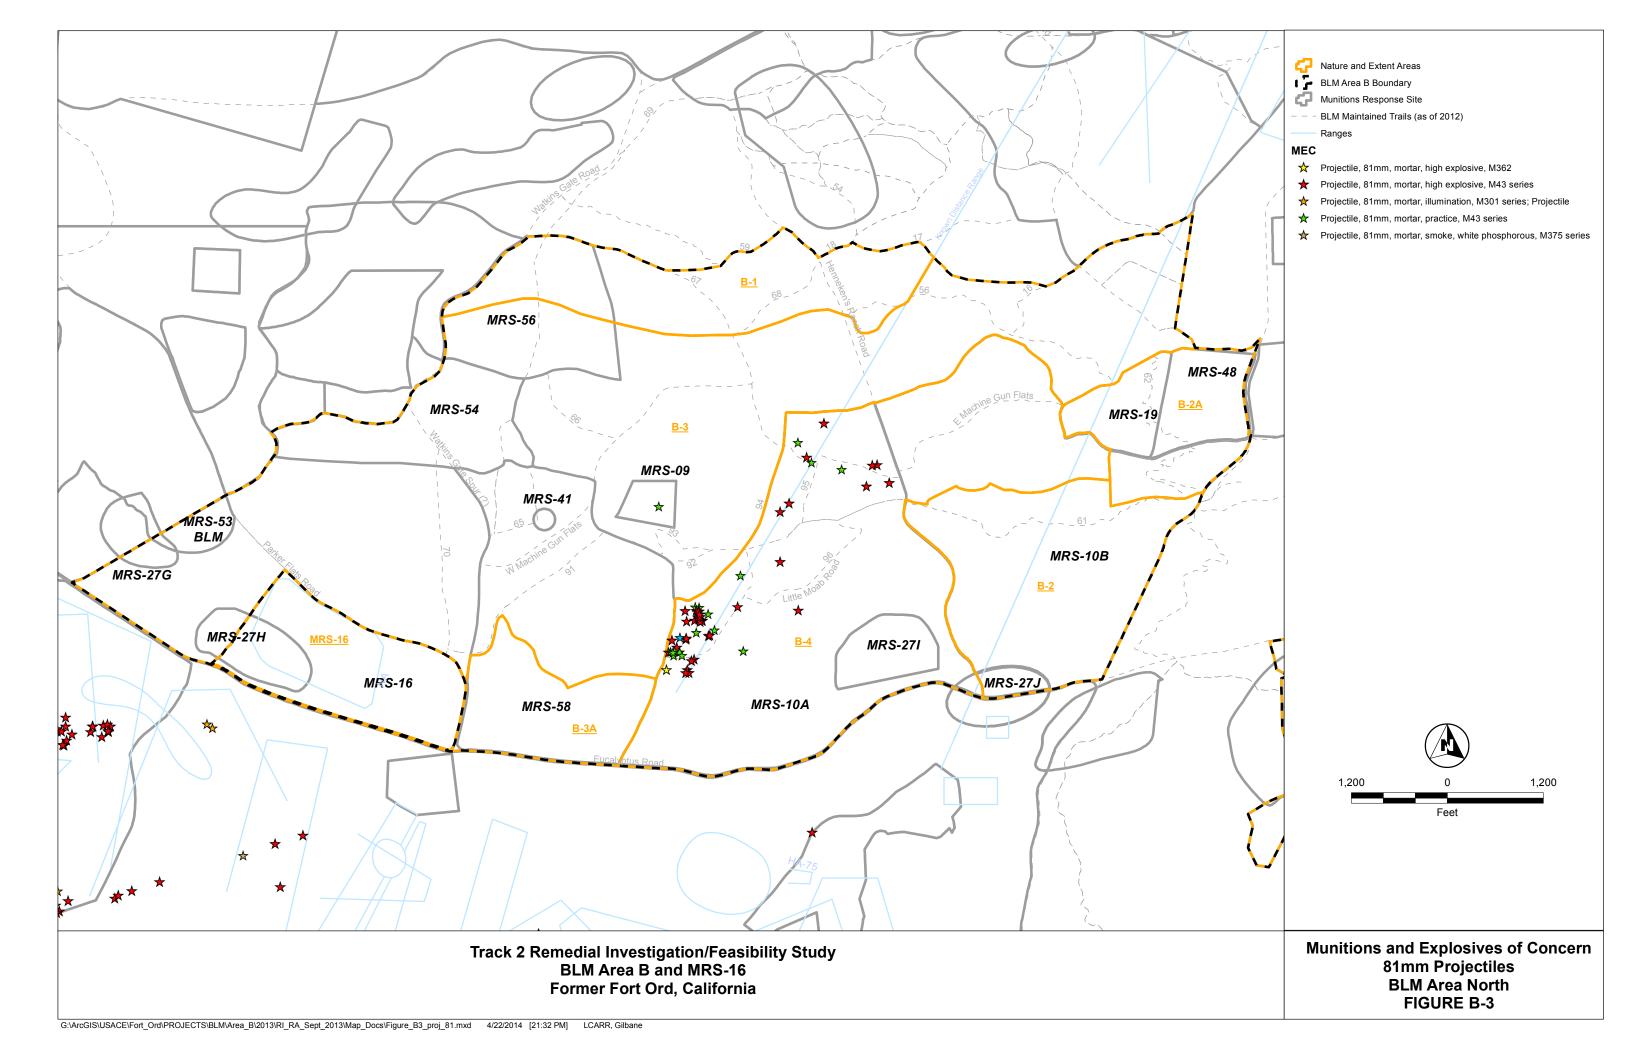

The * in MM item description field means there is no equivalent Master Pick List nomenclature for the item, the nomenclature from the original grid sheet was used.

Checklist C-1 Evaluation of Previous Work: BLM Area B Sub-Area B-1 Evaluation Checklist Part 1: Literature Review

Yes No Inconclusive TYPE OF TRAINING AND MILITARY **MUNITIONS EXPECTED** 1. Is there evidence that the site was used as an impact area (i.e., fired military munitions such as mortars, projectiles, rifle grenades or other Yes launched ordnance)? Sources reviewed and comments Based on interviews provided in the 1997 ASR, training areas were identified within sub-area B-1 including rifle grenades and shoulder launched projectiles (MRS-56). BLM Sub-Area B-1 lies within an area identified as Combat Ranges 2 and 3 on a 1945 training map. References: USAEDH, 1997 (ASR); Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 1980; 1984; 1987; Mactec/Shaw 2011. 2. Is there historical evidence that training involved use of High Explosive Inconclusive (HE) or Low Explosive (LE) items? Sources reviewed and comments The types of training identified through interviews conducted as part of the Archives Search indicates that HE and/or LE items could have been used. No HE or LE MEC items have been discovered to date. References: USAEDH, 1997; Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 1980; 1984; 1987; Mactec/Shaw 2011. 3. Is there historical evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) No but not explosives? Sources reviewed and comments There is no historical evidence that training involved the use of pyrotechnic and/or smoke producing items. References: USAEDH, 1997; Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 1980; 1984; 1987; Mactec/Shaw 2011. DEVELOPMENT AND USE OF THE SURROUNDING AREA 4. Does subsequent development or use of the area indicate that military Inconclusive munitions would have been used at the site? Sources reviewed and comments The area has not been developed. It is maintained as an open space with public access on established roads and trails. References:

USAEDH, 1997

Checklist C-2 Evaluation of Previous Work: BLM Area B Sub-Area B-1 Evaluation Checklist Part 2: Site Walk Evaluation

	Yes	No	Inconclusive
1. Is there evidence that the site was used as an impact area (i.e., fired militar) munitions such as mortars, projectiles, rifle grenades or other launched ordnance)?	Yes		

Sources reviewed and comments

A site walk performed by the USACE OE Safety Specialist identified expended pyrotechnic signals in sub-area B-1. No evidence of an impact area was observed during site walks conducted as part of the 1999 USA Surface Walk About, the visual surface removals conducted by Parsons, or the Basewide Range Assessment. The items found are consistent with the uses identified in the Archives Search Report.

The site walks conducted as part of the Site Assessment did identify the presence of expended impacting items such as mortars, projectiles, and rifle grenades in sub-area B-1. The site walks Non-MRS areas using random visual searches, technology-aided biased searches, and technology-aided random searches, as well as technology and transect searches in sub-area B-1.

2. Is there evidence that training involved use of High Explosive (HE) or Low Explosive (LE) items?

Yes		
-----	--	--

Sources reviewed and comments

MD found during the Site Assessment identified 81mm, HE, fragments (model unknown); and projectile,105mm, HE, fragment (model unknown); and projectile, 81mm, mortar, HE, M43 series, tail fins from items in BLM Area B Sub-Area B-1.

References

USAEDH, 1997 (ASR); Shaw, 2012.

3. Is there evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) but not explosives?

Yes	

Sources reviewed and comments

Several pyrotechnic and smoke producing MD items such as M74 air burst simulators and smoke grenades were found during site walks in BLM Sub-Area B-1 indicating that training did involve use of pyrotechnic and smoke producing items.

18. Do items found in the area indicate training would have included use o training items with energetic components?	Yes		
Sources reviewed and comments MD items found at sub-area B-1 included illumination signals, practice M7 2.36-inch rockets (expended) and smoke grenades, indicating training would have included use of items with energetic components.			
References USAEDH 1997; MACTEC/Shaw, 2011.			
19. Were items found in a localized area (possibly the remnants of a cleanupaction)?		No	
Sources reviewed and comments Items found during site walks were not in a localized area within sub-area B-1.			
References USAEDH 1997; MACTEC/Shaw, 2011; Shaw, 2012.			
20. Is it appropriate to divide the site into sectors to focus on areas o common usage, similar topography and vegetation, and/or unique site features?		No	
Sources reviewed and comments There are no distinct site features that would support dividing the site.			
21. Should site boundaries be revised?		No	

Sources reviewed and comments

Current site boundaries are appropriate based on the types of items found during the site assessment site walks.

	Yes	No	Inconclusive
22. Has the field data been collected and managed in accordance with quality control standards established for the project?	Yes		

Sources reviewed and comments

The site walks were completed according to general practices and according to the Progromatic Work Plan, Remaining RI/FS Areas Management Plan and Technical Memoranda, and the Basewide Range Assessment Work Plan.

References

MACTEC/Shaw, 2010; MACTEC/Shaw, 2011; Parsons, 2001; IT, 2001.

Does the site walk evaluation provide sufficient evidence to warrant furthe investigation?

Comments

Sub-area B-1 is considered adequately characterized. Visual site walks/ reconnaissance have been conducted in support of the ASR, by USA in 1999, as part of the BRA in 2001, by Parsons in 2002, and an instrument-aided searches were made by Shaw in 2011. Based on the results of all the site walks conducted, sufficient data is available to prepare an FS.

Checklist C-3 Evaluation of Previous Work: BLM Area B Sub-Area B-2 Evaluation Checklist Part 1: Literature Review

Yes No Inconclusive TYPE OF TRAINING AND MILITARY **MUNITIONS EXPECTED** 1. Is there evidence that the site was used as an impact area (i.e., fired military munitions such as mortars, projectiles, rifle grenades or other Yes launched ordnance)? Sources reviewed and comments Interviews with the former Fort Ord Fire Chief during the Archive Search Report identified the use of shoulder-launched projectiles and rifle grenades in the 1940s and 1950s at MRS-10B (sub-area B-2). A walk of OE-10 in support of the ASR identified 81mm high explosive and 60mm illumination mortar projectiles on the ground surface; however, the report does not specify whether these items were found in MRS-10A or MRS-10B. The site was included in an area that was identified on the 1960 Fort Ord Fire Department Scrap Book Firebreak Map as being included in an "area of unusual hazard and possible live dud area." References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010 2. Is there historical evidence that training involved use of High Explosive Inconclusive (HE) or Low Explosive (LE) items? Sources reviewed and comments A walk of OE-10 in support of the Archives Search Report identified 81mm high explosive mortar projectiles (MD) on the ground surface; however, the report does not specify whether these items were found in MRS-10A or MRS-10B. References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010 3. Is there historical evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) Yes but not explosives? Sources reviewed and comments This site included Training Area MRS-27J which was used for training, maneuvers, and as overnight bivouac areas. References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010 DEVELOPMENT AND USE OF THE SURROUNDING AREA 4. Does subsequent development or use of the area indicate that military Inconclusive munitions would have been used at the site? Sources reviewed and comments No development of the surrounding area has occurred. References: MACTEC/Shaw, 2010

Evaluation of Previous Work: BLM Area B Sub-Area B-2 Evaluation Checklist Part 1: Literature Review

	Yes	No	Inconclusive	
5. Does use of area surrounding the site indicate that military munitions would have been used at the site?	Yes			
Sources reviewed and comments According to historical documents, and training maps, sub-area B-2 is surrounded by known training areas including Sites MRS-10A, MRS-19, and MRS-48. The site includes portions of Training Area MRS-27J which was used for general maneuvers and bivouac training.				
References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010				
ESTABLISHMENT OF SITE BOUNDARIES				
6. Is there evidence of training areas on <u>aerial photographs</u> that could be used to establish boundaries?			Inconclusive	
Sources reviewed and comments The aerial photographs do show several disturbed areas within sub-area B-2 that would have been used to establish training area boundaries, but would not affect the boundaries of sub-area B-2. Current boundaries are based primarily the MRS-10B boundary, which is based on training areas, and roads and trails. The exception is the northern boundary which is based on the extent of removal action conducted in northern MRS-10B, and MEC items found during SS/GS sampling conducted immediately south of the MRS-10B removal action, and south of MRS-19 and MRS-48.				
References:				
Aerial photographs dated 1941, 1949, 1956, 1966, 1975, 1978, 1980, 1981,1986 a	and 2000;	; MACTEC/	Shaw, 2011.	
7. Is there evidence of training on <u>historical training maps</u> that could be used to establish boundaries?	Yes			
Sources reviewed and comments Sub-area B-2 was identified on various training maps as Area K. This site lies within Training Area K on a 1964 trainir map.				
References: USAEDH, 1997 (ASR); HLA, 2000.				
8. Should current boundaries be revised?		No		
Sources reviewed and comments Based on review of the available aerial photographs and training maps the boundary	aries are a	appropriate	as established.

Fort Ord Military Munitions Response Program Database (USACE, 2013); MACTEC/Shaw, 2011

Yes No Inconclusive 18. Was equipment used capable of detecting items suspected at the site Inconclusive at the maximum expected depth? Sources reviewed and comments Results of the ODDS indicate that most of the grenade items (hand and rifle) suspected are detectable at their penetration depths plus one foot with the Schonstedt Model GA-52/Cx because they are not expected to penetrate below one foot. However, the probability of detection ranges from 67% to 78% based on the seeded test trials. The probability of detection ranges from 27% to 55% for the 81mm projectile; therefore, it is less likely that the GA-52/Cx would be able to detect 81mm at their maximum expected depth. References: Parsons, 2002 19. Was equipment used capable of detecting the types of items (e.g., non-Yes ferrous) suspected at the site? Sources reviewed and comments Equipment used was capable of detecting munitions with ferrous components, such as grenade fuzes. Non-ferrous items were not suspected at sub-area B-2. References: Parsons, 2002 20. Do the results of the ODDS indicate that items suspected at the site would have been detected by the instrument used at the time of Yes investigation? Sources reviewed and comments The Schonstedt Model GA-52/Cx was used for SS/GS sampling at sub-area B-2. Schonstedt Model GA-52/Cx is capable of detecting grenades (hand and rifle) and 81mm mortar projectiles (Category III/IV) suspected at the site; however, the instruments capabilities decreases with depth. References: Parsons, 2002 21. Do results of the investigation indicate that suspected items could be detected with a high level of confidence at observed and expected depth Nο ranges?

Sources reviewed and comments

Items were located within one foot of the surface which, according to ODDS, would result in a higher probability of detection. The probability of detection ranges from 27% to 55% for the 81mm projectile; therefore, it is less likely that the GA-52/Cx would be able to detect 81mm at their maximum expected depth.

Parsons, 2002

Evaluation of Previous Work: BLM Area B Sub-Area B-2 Evaluation Checklist Part 3: Sampling Evaluation

22.	Were all the instruments used to evaluate the site maintained and
cali	brated in accordance with associated work plan and manufacturer's
spe	cifications?

Yes	No	Inconclusive
Yes		

Sources reviewed and comments

All work was performed in accordance with the approved Work Plan. Instruments and equipment requiring maintenance and/or calibration were checked prior to the start of each workday. Batteries were replaced as needed and the instruments were checked against a known source.

References:

CMS, 1996; USA, 2001.

23. Based on the anticipated target density (MEC items per acre) has the minimal amount of sampling acreage been completed in accordance with the scope of work or contractor work plan?

Sources reviewed and comments

SS/GS sampling was performed in accordance with the scope of work and the site-specific Work Plan.

References:

CMS, 1995.

24. Based on sampling procedure (e.g., grids, transects, and/or random walks) was a percentage of the site completed to provide 95% confidence in a MEC density estimate, and if so, provide total area investigated and the MEC density estimate.

Sources reviewed and comments

The southern half of MRS-10B (sub-area B-2) was investigated through SS/GS sampling with 58 100x200-foot grids (25 acres). Density is calculated using UXC Estimator assuming a 95% confidence level. See Section 4.0 of the text for more information regarding the use and limitations of UXO Estimator.

Total Area: Ap	oprox. 142.9 acres
MEC Density:	0.15 items per acre

References:

CMS, 1996; USA, 2001; MACTEC/Shaw, 2011.

25. What percentage of the anomalies were intrusively investigated?

Sources reviewed and comments

Generally, 32% to 40% of anomalies are intrusively investigated during SS/GS sampling.

References:

USA, 2001; MACTEC/Shaw, 2011

Total % of anomalies	
investigated:	<40%

26. Was the appropriate data processing scheme used for the site, how was the data processed?

Not	Applicable
-----	------------

Sources reviewed and comments

Schonstedt magnetometers are analog so no digital data was collected for processing.

USA, 2001; MACTEC/Shaw, 2011

Checklist C-4 Evaluation of Previous Work: BLM Area B Sub-Area B-2

valuation of Previous Work: BLM Area B Sub-Area B-2 Evaluation Checklist Part 3: Sampling Evaluation

27. Has the field data been collected and managed in accordance w	/ith
quality control standards established for the project	

Yes	No	Inconclusive
Yes		

Sources reviewed and comments

All operations at the site were performed in accordance with the approved Site-Specific Work Plan.

References:

CMS, 1995.

RESULT OF SAMPLING EVALUATION

Does the sampling evaluation provide sufficient evidence to warrant further investigation?

Comments

The sampling evaluation provides sufficient evidence that limited MEC/MD has be found within sub-area B-2. Further investigation would not necessarily provide data that would change the final decision for sub-area B-2. A risk assessment and FS should be performed to determine the appropriate response alternative for sub-area B-2.

Evaluation of Previous Work: BLM Area B Sub-Area B-2A Evaluation Checklist Part 3: Sampling Evaluation

	Yes	NO	inconclusive	
17. Should current site boundaries be revised?		No		
Sources reviewed and comments There is no indication that the boundary of BLM Area B Sub-Area B-2A should be revised based on aerial photography review and as a result of sampling operations.				
References: USAEDH, 1997; Fort Ord Military Munitions Response Program Database (USAC	E, 2013); MA	ACTEC/Shaw	v, 2011.	
18. Was equipment used capable of detecting items suspected at the site at the maximum expected depth?			Inconclusive	
Sources reviewed and comments Results of the ODDS indicate that most of the grenade items (hand and rifle) suspected are detectable at their penetration depths plus one foot with the Schonstedt Model GA-52/Cx because they are not expected to penetrate below one foot. However, the probability of detection ranges from 67% to 78% based on the seeded test trials. The probability of detection ranges from 27% to 55% for an 81mm projectile; therefore, it is less likely that the GA-52/Cx would be able to detect 81mm at their maximum expected depth. The probability of detection ranges from 50% to 100% for the 105mm projectile; therefore, it is likely that the GA-52/Cx would be able to detect the 105mm.				
References: Parsons, 2002a				
19. Was equipment used capable of detecting the types of items (e.g., non-ferrous) suspected at the site?			Inconclusive	
Sources reviewed and comments Equipment used was capable of detecting munitions with ferrous components. It would be less effective in detecting non-ferrous material or items with a small amount of ferrous material (grenade fuzes); however these items would likely be found at or near the surface, therefore, the reduced detection capability for grenade fuzes, should not be significant.				
References: Parsons, 2002a				
20. Do the results of the ODDS indicate that items suspected at the site would have been detected by the instrument used at the time of investigation?	Yes			
Sources reviewed and comments The Schonstedt Model GA-52/Cx is capable of detecting the types of projectiles are	nd grenades	found at sub-	-area B-2A.	
References: Parsons, 2002a				
21. Do results of the investigation indicate that suspected items could be detected with a high level of confidence at observed and expected depth ranges?		No		
Sources reviewed and comments Items were located within 1.5 foot of the surface which, according to ODDS, would detection. The probability of detection ranges from 27% to 55% for the 81mm proj. GA-52/Cx would be able to detect 81mm at their maximum expected depth.				

References: Parsons, 2002a

Evaluation of Previous Work: BLM Area B Sub-Area B-2A Evaluation Checklist Part 3: Sampling Evaluation

22. Were all the instruments used to evaluate the site maintained and calibrated in accordance with associated work plan and manufacturer's specifications?

Yes	No	Inconclusive
Yes		

Sources reviewed and comments

QA/QC was performed by USA/CMS throughout the sampling as documented in the Final After Action Reports.

References:

USA, 2001; CMS, 1997

23. Based on the anticipated target density (MEC items per acre) has the minimal amount of sampling acreage been completed in accordance with the scope of work or contractor work plan?

Yes		
-----	--	--

Sources reviewed and comments

The sampling was completed within the scope of the site-specific work plans.

References:

USA, 2001; CMS, 1997

24. Based on sampling procedure (e.g., grids, transects, and/or random walks) was a percentage of the site completed to provide 95% confidence in a MEC density estimate, and if so, provide total area investigated and the MEC density estimate.

Sources reviewed and comments

MRS-19 was investigated through 100% grid sampling and site walks. Twelve 100 by 100-foot grids were sampled to a depth of 4 feet. Sampling and site walks resulted in the discovery and removal of 8 MEC and MD items. Sampling included about 11% of MRS-19. MRS-48 was investigated through SS/GS sampling. Nine 100 by 200-foot grids were sampled to a depth of 4 feet. Sampling resulted in the discovery and removal of 3 MEC items and 165 MD items. Sampling included about 14% of the site. A MEC density was calculated for BLM Area B Sub-Area B 2A using UXO Estimator assuming a 95% confidence level. See Section 4.0 of the text for more information regarding the use and limitations of UXO Estimator.

	Total Area: Ap	oprox. 74 acres
-	MEC Density:	0.8 MEC items per acre

References:

HFA, 1994; USA, 2001; CMS, 1997

25. What percentage of the anomalies were intrusively investigated?

Sources reviewed and comments

100 percent of the anomalies identified during 100 percent sampling to 4 feet were intrusively investigated. Generally, 32% to 40% of anomalies are intrusively investigated during SS/GS sampling.

References:

USA, 2001; CMS, 1997

Total % of anomalies	
investigated:	<40%

26. Was the appropriate data processing scheme used for the site, how was the data processed?

	Not Ap	plicable
--	--------	----------

Sources reviewed and comments

Data were collected using Schonstedt magnetometers. Schonstedt magnetometers are analog so no digital data was collected for processing.

3. Is there historical evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) but not explosives?	Yes		
Sources reviewed and comments Review of training maps and historical documents indicates that training would have producing items, practice mines, and simulators.	re involved use	of pyrotechn	ic and smoke
References: USAEDH, 1997; Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 1980	; 1984; 1987;	MACTEC/Sha	aw, 2011.
DEVELOPMENT AND USE OF THE SURROUNDING AREA			
4. Does subsequent development or use of the area indicate that military munitions would have been used at the site?			Inconclusive
Sources reviewed and comments The area has not been developed. It is maintained as an open space with public account puring reuse of the property as a recreational and habitat management area, very been found. Items included one projectile, 60mm, mortar, illumination (MD). This is	few MEC and	munitions del	oris items have

References:

USAEDH, 1997

and pyrotechnic items were used at the site.

Evaluation of Previous Work: BLM Area B Sub-Area B-3 Evaluation Checklist Part 1: Literature Review

	Yes	No	Inconclusive	
5. Does use of area surrounding the site indicate that military munitions would have been used at the site?	Yes			
Sources reviewed and comments According to historical documents and training maps BLM Area B sub-area B-3 is areas, many of which have been found to contain MEC and MD. The sites include 10A and MRS-10B to the east and southeast, and MRS-16 to the south.				
Evaluation of 37mm MEC and MD items from the ESCA Remediation Program's meast Garrison MRA (FORA, 2014) resulted in an addition of a 31-acre area west o 16.				
References: USAEDH, 1997; MACTEC/Shaw, 2011; Former Fort Ord Military Munitions Response	onse Program	Database; FC	PRA, 2014.	
ESTABLISHMENT OF SITE BOUNDARIES				
6. Is there evidence of training areas on $\underline{\text{aerial photographs}}$ that could be used to establish boundaries?			Inconclusive	
Sources reviewed and comments The aerial photographs show some disturbed areas within several of the munitions 56, and MRS-58). The disturbed areas are small in comparison to the much larger boundaries of those sites.				
References: Aerial photographs dated 1966, 1975, 1978, 1986, 1989, and 2009, MACTEC/Sha	aw, 2011.			
7. Is there evidence of training on <u>historical training maps</u> that could be used to establish boundaries?			Inconclusive	
Sources reviewed and comments The boundaries of MRS-41 and the training sites MRS-27G and MRS-27H are based on boundaries as presented on training maps. Boundaries of the other MRSs located within BLM Area B sub-area B-3 are based on areas were training reportedly took place.				
References: Army, 1945; "After 1953"; 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 19	80; 1984; 198	7; MACTEC/S	Shaw, 2011.	
8. Should current boundaries be revised?		No		

Sources reviewed and comments

Based on the literature review no changes to the site boundaries would be warranted. Evaluation of 37mm MEC and MD items from the ESCA Remediation Program's munitions response activities in the Future East Garrison MRA (FORA, 2014) resulted in an addition of a 31-acre area west of Barloy Canyon Road and south of Trail 16.

	Yes	No	Inconclusive
1. Is there evidence that the site was used as an impact area (i.e., fired military munitions such as mortars, projectiles, rifle grenades or other launched ordnance)?			Inconclusive

Sources reviewed and comments

A site walk performed by the USACE OE Safety Specialist (MRS-54) identified expended practice projectiles, smoke grenades, practice mortars, projectiles and rockets; however, the site walk included areas outside of BLM Area B and the locations of the items found were not documented. No evidence of an impact area was observed during site walks conducted as part of the Basewide Range Assessment in MRS-9, MRS-27G, MRS-41, MRS-54, MRS-56 (southern half), and MRS-58, during the USA Surface Walk About conducted in the non-MRS areas, or during site walks by Parsons conducted as part of a visual surface removal in MRS-9, 53BLM, 54, 56, 58, and non-MRS areas. The items found are consistent with the uses identified in the ASR.

The site walks conducted as part of the site assessment also identified the presence of impacting items such as mortar projectiles. The site walks included pre-planned routes in MRS-54, MRS-41, MRS-58 (northern half), MRS-27G, MRS-27H, MRS-9, and areas outside MRS boundaries using random visual searches, instrument-aided biased searches, and instrument-aided random searches in MRS-56 (the southern half of which is in sub-area B-3) and in areas outside of MRS boundaries but within sub-area B-3.

USAEDH, 1997; USA, 1999; Fort Ord Military Munitions Response Program Data Base (USACE, 2013); MACTEC/Shaw, 2011; Parsons, 2002, Shaw, 2012.

2. Is there evidence that training involved use of High Explosive (HE) or Low		Inconclucivo
Explosive (LE) items?		Inconclusive

Sources reviewed and comments

A site walk performed by the USACE OE Safety Specialist identified expended practice mortar projectiles, other projectiles, and rockets in MRS-54; however, the site walk included areas outside of the sub-area B-3 boundary and the locations of the items found were not documented. The items were not documented as to whether they were HE or LE. No evidence of an impact area was observed during site walks conducted as part of the Basewide Range Assessment. The items found are consistent with the uses identified in the Archives Search Report. MD found during the site assessment also identified 75 mm (outside MRS boundaries), 81mm projectile fragments (MRS-56) from HE items. A 2.36-inch rocket (MEC) was found during the site assessment in a non-MRS area east of MRS-56.

References

USAEDH, 1997 (ASR); Fort Ord Military Munitions Response Program Database (USACE, 2013); MACTEC/Shaw, 2011; Shaw, 2012.

	Yes	No	Inconclusive
3. Is there evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) but not explosives?	Yes		

Sources reviewed and comments

Several pyrotechnic items were found during site walks indicating that training did involve use of pyrotechnic and smoke producing items. The items found during the site walks are consistent with the types of training identified from historical training maps including general training/bivouac areas and training with other practice items.

References

USAEDH, 1997 (ASR); Army 1957; 1965; 1956; 1967a; 1967b; 1972; 1977; 1980; 1984; 1987; MACTEC/Shaw, 2011; Shaw 2012

4. Does subsequent development or use of the area indicate potential that military munitions would have been used at the site?

	Inconclusive

Sources reviewed and comments

The area is undeveloped. It is maintained as an open space recreational area. Throughout the reuse of the property as a recreational and habitat management area, very few MEC and munitions debris items have been found. Items included smoke hand grenades and expended pyrotechnic items. The types of items indicate that practice military munitions and pyrotechnic items were used at the site.

References

USAEDH, 1997; MACTEC/Shaw, 2011

5. Does use of area surrounding the site indicate that military munitions would have been used at the site?

Yes

Sources reviewed and comments

Sub-area B-3 is surrounded by multiple MRSs used for a variety of training activities. According to historical documents training in surrounding areas included the use of projectiles mortars, rockets, grenades, signals, flares and smoke producing items. Review of data from removal actions and sampling at these sites indicates that several sites, including MRS-10A, MRS-10B, MRS-16, and the Parker Flats MRA, were used as target/impact areas.

	Yes	No	Inconclusive
TYPE OF TRAINING AND MILITARY MUNITIONS EXPECTED			
1. Is there evidence that the site was used as an impact area (i.e., fired military munitions such as mortars, projectiles, rifle grenades or other launched ordnance)?	Yes		
Sources reviewed and comments Based on interviews provided in the 1997 ASR, several training areas were idented points and target area for rockets and shoulder launched projectiles (MRS-58). Explored training map.			
References: USAEDH, 1997 (ASR); Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 197	77; 1980; 1984	ŀ; 1987; Mact	ec/Shaw 2011.
2. Is there historical evidence that training involved use of High Explosive (HE) or Low Explosive (LE) items?			Inconclusive
Sources reviewed and comments The types of training identified through interviews conducted as part of the Archives Search indicates that HE and/or LE items could have been used. No HE or LE MEC items have been discovered to date.			
References: USAEDH, 1997; Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 198	30; 1984; 1987	7; Mactec/Sha	aw 2011.
3. Is there historical evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) but not explosives?		No	
Sources reviewed and comments There is no historical evidence that training involved the use of pyrotechnic and/o	or smoke prod	lucing items.	
References: USAEDH, 1997; Army, 1956; 1957; 1958; 1965; 1967a; 1967b; 1972; 1977; 198	0; 1984; 1987	; Mactec/Sha	w 2011.
DEVELOPMENT AND USE OF THE SURROUNDING AREA			
4. Does subsequent development or use of the area indicate that military munitions would have been used at the site?			Inconclusive
Sources reviewed and comments The area has not been developed. It is maintained as an open space with public	c access on es	stablished roa	ids and trails.
References: USAEDH, 1997

Checklist C-13 Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 1: Literature Review

Yes No Inconclusive TYPE OF TRAINING AND MILITARY **MUNITIONS EXPECTED** 1. Is there evidence that the site was used as an impact area (i.e., fired military munitions such as mortars, projectiles, rifle grenades or other Yes launched ordnance)? Sources reviewed and comments Interviews with the former Fort Ord Fire Chief identified the use of shoulder-launched projectiles and rifle grenades in the 1940s and 1950s at MRS-10B. A walk of this area in support of the Archives Search Report identified 81mm high explosive and 60mm illumination mortars on the ground surface. Sites MRS-10A and MRS-10B were identified in the Fort Ord on the 1960 Fire Department Scrap Book Firebreak Map as being included in an "area of unusual hazard and possible live dud area." References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010 2. Is there historical evidence that training involved use of High Explosive Yes (HE) or Low Explosive (LE) items? Sources reviewed and comments A walk of this area in support of the Archives Search Report (ASR) identified 81mm high explosive and 60mm illumination mortar projectiles on the ground surface. References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010 3. Is there historical evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) Yes but not explosives? Sources reviewed and comments A walk of this area conducted in support of the ASR identified evidence of training with simulators, flares, and smoke grenades. These sites included Training Area MRS-27I which was used for training, maneuvers and as an overnight bivouac area. References: USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010 DEVELOPMENT AND USE OF THE SURROUNDING AREA 4. Does subsequent development or use of the area indicate that military Inconclusive munitions would have been used at the site? Sources reviewed and comments

References:

MACTEC/Shaw, 2010

No development of the surrounding area has occurred.

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 1: Literature Review

5.	Does use	of area	surrounding	the site	indicate	that milita	ry munitions
W	ould have	heen us	and at the site	2			

 Yes	No	Inconclusive
Yes		

Sources reviewed and comments

According to historical documents, and training maps, these sites are surrounded by known training areas including Sites MRS-58, MRS-09, MRS-19, MRS-48. The sites include all of Training Site MRS-27I which was used for general maneuvers and bivouac training.

References:

USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010

ESTABLISHMENT OF SITE BOUNDARIES

6. Is there evidence of training areas on <u>aerial photographs</u> that could be used to establish boundaries?

	Inconclusive

Sources reviewed and comments

The aerial photographs do show several disturbed areas within MRS-10A and MRS-10B that may have been used to initially establish training area boundaries, but did not affect the boundaries of sub-area B-4. MRS-10A and MRs-10B boundaries were based on training areas identified during the ASR further defined by roads and trails. BLM Sub-Area boundaries are based on removal actions that occurred in MRS-10A and the northern portion of MRS-10B.

References:

Aerial photographs dated 1941, 1949, 1956, 1966, 1975, 1978, 1980, 1981, 1986, and 2000; MACTEC/Shaw, 2011.

7. Is there evidence of training on <u>historical training maps</u> that could be used to establish boundaries?

Yes		
-----	--	--

Sources reviewed and comments

These sites were identified on various training maps as Area K and Area L. These sites lie within Training Areas K and L on a 1964 training map.

References:

USAEDH, 1997 (ASR); HLA, 2000.

8. Should current boundaries be revised?

Nο	

Sources reviewed and comments

Based on review of the available aerial photographs and training maps the boundaries are appropriate as established.

References:

USAEDH, 1997 (ASR); MACTEC/Shaw, 2011; MACTEC/Shaw, 2010

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 1: Literature Review

Yes No Inconclusive

RESULTS OF LITERATURE EVALUATION

Does the literature review provide sufficient evidence to warrant further investigation?

Yes		
-----	--	--

Comments

MRS-10A and MRS-10B were identified on various training maps and in the ASR as training areas. Site walks in support of the ASR identified a variety of munitions items including high explosives, practice items, and pyrotechnics.

Yes Inconclusive Nο TYPE OF TRAINING AND MILITARY MUNITIONS EXPECTED 1. Is there evidence that the site was used as an impact area (i.e., fired military munitions such as mortars, projectiles, rifle grenades and other Yes launched military munitions): Sources reviewed and comments Sampling performed by CMS in 1996 at MRS-10A identified numerous mortar projectiles and rocket MEC items. References: CMS, 1996; Fort Ord Military Munitions Response Program Data Base (USACE, 2013). 2. Is there evidence that training involved use of High Explosive (HE) or Yes Low Explosive (LE) items? Sources reviewed and comments Sampling performed at MRS-10A identified numerous high explosive (HE) 81mm mortar projectiles (MEC) and a 3.5-inch References: CMS, 1996; Fort Ord Military Munitions Response Program Data Base (USACE, 2013); MACTEC/Shaw, 2010. 3. Is there evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) but not Yes explosives? Sources reviewed and comments Both pyrotechnics and smoke producing items (MEC) were found at both MRS-10A and MRS-10B. References: CMS, 1996; USA, 2001; Fort Ord Military Munitions Response Program Data Base; MACTEC/Shaw, 2010. 4. Was sampling and/or reconnaissance performed within the appropriate Yes area? Sources reviewed and comments Review of sampling results indicates that sample grids were placed randomly throughout MRS-10A and SS/GS grids were placed in the MRS-10B portion of sub-area B-4. Sampling was performed within appropriate areas of sub-area B-4. The site boundaries were established by the ASR based on historic training maps and site reconnaissance. References: CMS, 1996; USA, 2001; USAEDH, 1997 (ASR); MACTEC/Shaw, 2010. 5. Does sampling indicate MEC and/or munitions debris are present at the Yes site? Sources reviewed and comments MEC and munitions debris were found by CMS during the sampling event at MRS-10A and during the SS/GS sampling at

MRS-10B.

USAEDH 1997 (ASR); Fort Ord Military Munitions Response Program Data Base (USACE, 2013); MACTEC/Shaw, 2010; CMS, 1996; USACE/EarthTech, 1998; USA, 2001.

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 3: Sampling Evaluation

	Yes	No	Inconclusive
6. Were the type(s) of items found consistent with the type of training identified for the site?	Yes		
Sources reviewed and comments Items found were generally consistent with the types of training identified on his known distance ranges.	storical traini	ng maps, in	cluding combat and
References: USAEDH, 1997 (ASR); HLA, 2000; MACTEC/Shaw, 2011; MACTEC/Shaw, 2011	10; CMS, 19	96; USA, 20	01.
7. Were the type(s) of items found consistent with the era(s) in which training was identified?	Yes		
Sources reviewed and comments Items found were consistent with the training in the 1940s, 1950s and 1960s.			
References: CMS, 1996; USA, 2001.			
8. Was HE fragmentation found?			Inconclusive
Sources reviewed and comments No HE fragmentation was reported as found at MRS-10A or MRS-10B.			
References: USAEDH 1997 (ASR); Fort Ord Military Munitions Response Program Data Ba 1996; USA, 2001.	se, 2013; M	ACTEC/Sha	w, 2011; CMS,
9. Was HE found?	Yes		
Sources reviewed and comments Sampling performed at MRS-10A identified high explosive (HE) 81mm mortar procession of the sampling lists these items as OE; however, the current MMRP of No HE MEC were found during sampling at MRS-10B.			
References: Fort Ord Military Munitions Response Program Database (USACE, 2013); CMS	S, 1996; USA	۹, 2001.	
10. Were LE found?	Yes		
Sources reviewed and comments No LE items were found during sampling at MRS-10A or MRS-10B.			
References: Fort Ord Military Munitions Response Program Database (USACE, 2013); Sha	w 2011a; Sh	aw 2011b	
11. Were pyrotechnics found?	Yes		
Sources reviewed and comments M125 series illumination signals, M18 Smoke Grenades, M49 trip flares, and M	1125 illumina	tion signals	(MEC and MD) wer

found at MRS-10A and MRS-10B.

References:

Fort Ord Military Munitions Response Program Database (USACE, 2013); CMS, 1996; USA, 2001.

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 3: Sampling Evaluation

	Yes	No	Inconclusive	
12. Were smoke producing items found?	Yes			
Sources reviewed and comments M18 Series smoke hand grenades (ISD) were found during sampling at MRS-10A. An M126 series ground illumination signal and an M74 series simulator projectile were found during SS/GS sampling at MRS-10B.				
References: Fort Ord Military Munitions Response Program Database (USACE, 2013); CMS	, 1996; US	A, 2001.		
13. Were explosive items found (e.g. rocket motors with explosive components, fuzes with explosive components)?	Yes			
Sources reviewed and comments Hand grenade fuzes (MEC and MD) were found during sampling at MRS-10A ar	nd MRS-10I	В.		
References: Fort Ord Military Munitions Response Program Database (USACE, 2013); CMS, 1996; USA, 2001.				
14. Do items found in the area indicate training would have included use of Yes				
Sources reviewed and comments Practice projectiles (Stokes Mortars), practice mines, practice hand grenades, and simulators were found during sampling MRS-10A. These items are labeled as ISD in the database. One projectile simulator (MEC) and a practice grenade (MD) were found during sampling at MRS-10B.				
References: Fort Ord Military Munitions Response Program Database (USACE, 2013); MACTEC/Shaw 2011; CMS, 1996; USA, 2001.				
15. Were items found in a localized area (possibly the remnants of a cleanup action)?		No		
Sources reviewed and comments There is no evidence to suggest that a cleanup action had occurred prior to the sampling event.				
References: CMS, 1996; USA.2001.				
16. Has the site been divided into sectors to focus on areas of common usage, similar topography and vegetation, and/other unique site features?		No		

Sources reviewed and comments

Sub-area B-4 includes MRS-10A and the northern portion of MRS-10B. The sub-area boundaries are based on the extent of removal action activites in MRS-10A and MRS-10B and further defined by roads, trails and terrain features (see checklist Part 4). The sub-area was not divided into sectors for sampling.

References:

MACTEC/Shaw 2011; CMS, 1996; USA,2001.

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 3: Sampling Evaluation

	Yes	No	Inconclusive
17. Should current site boundaries be revised?		No	
Sources reviewed and comments There is no indication that the boundary of sub-area B-4 should be revised. The eastern boundary of sub-area B-4 was determined based on the SS/GS sampling in MRS-10B.			
References: Fort Ord Military Munitions Response Program Database (USACE, 2013); MACTEC/Shaw, 2011			
18. Was equipment used capable of detecting items suspected at the site at the maximum expected depth?			Inconclusive
Sources reviewed and comments Results of the ODDS indicate that for Category I and II items, the probability of detection ranges from 67% to 78% based of the seeded test trials. The probability of detection ranges from 27% to 55% for an 81mm projectile; therefore, it is less likely that the GA-52/Cx would be able to detect 81mm at their maximum expected depth.			
References: Parsons, 2002			
19. Was equipment used capable of detecting the types of items (e.g., non-ferrous) suspected at the site?	Yes		
Sources reviewed and comments Equipment used was capable of detecting the itemes expected at the site.			
References: Parsons, 2002			
20. Do the results of the ODDS indicate that items suspected at the site would have been detected by the instrument used at the time of investigation?	Yes		
Sources reviewed and comments The Schonstedt Model GA-52/Cx was used for sampling at MRS-10A and MRS-10B. Schonstedt Model GA-52/Cx is capable of detecting 81mm mortar projectiles (Category III/IV) suspected at the site; however, the instruments capabilities decreases with depth.			
References: Parsons, 2002			
21. Do results of the investigation indicate that suspected items could be detected with a high level of confidence at observed and expected depth ranges?	Yes		
Sources reviewed and comments Results of the ODDS suggest that the Schonstedt Model GA-52/Cx should be ab	le to detec	t ferrous ME	C at shallow depths.

References: Parsons, 2002

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 3: Sampling Evaluation

22. V	Vere all the instruments used to evaluate the site maintained and
calib	prated in accordance with associated work plan and manufacturer's
spec	cifications?

Yes	No	Inconclusive
Yes		

Sources reviewed and comments

All work was performed in accordance with the approved Work Plan. Instruments and equipment requiring maintenance and/or calibration were checked prior to the start of each workday. Batteries were replaced as needed and the instruments were checked against a known source.

References:

CMS, 1996; USA, 2001.

23. Based on the anticipated target density (MEC items per acre) has the minimal amount of sampling acreage been completed in accordance with the scope of work or contractor work plan?

Sources reviewed and comments

Sampling was performed in accordance with the scope of work and the site-specific Work Plan.

References:

CMS, 1996; USA, 2001.

24. Based on sampling procedure (e.g., grids, transects, and/or random walks) was a percentage of the site completed to provide 95% confidence in a MEC density estimate, and if so, provide total area investigated and the MEC density estimate.

Sources reviewed and comments

MRS-10A was investigated through grid sampling. 113 100X100-foot grids randomly distributed throughout MRS-10A. Sampling resulted in the discovery of 79 MEC and MD items which were investigated and removed. The northern portion of MRS-10B using SS/GS sampling. 22 MEC items were investigated and removed. Density is calculated using UXO Estimator assuming a 95% confidence level. See Section 4.0 of the text for more information regarding the use and limitations of UXO Estimator.

	Total Area: App	rox. 25.9 acres
of C	MEC Density:	0.89 items per acre

References:

CMS, 1996; USA, 2001; MACTEC/Shaw, 2011.

25. What percentage of the anomalies were intrusively investigated?

Sources reviewed and comments

100 percent of the anomalies identified during sampling at MRS-10A were intrusively investigated. SS/GS sampling was conducted in the northern portion of MRS-10B. Generally, 32% to 40% of anomalies are intrusively investigated during SS/GS sampling.

References:

CMS, 1996; USA, 2001; MACTEC/Shaw, 2011

Total % of anomalies	
investigated:	less than 100

26. Was the appropriate data processing scheme used for the site, how was the data processed?

		Not Applicable
--	--	----------------

Sources reviewed and comments

Schonstedt magnetometers are analog so no digital data was collected for processing.

References:

CMS, 1996; USA, 2001; MACTEC/Shaw 2011

	Yes	No	Inconclusive
ected and managed in accordance with	Voc		

27. Has the field data been collected and managed in accordance with quality control standards established for the project:

Sources reviewed and comments

All operations at the site were performed in accordance with the approved Site-Specific Work Plans.

References:

CMS, 1996; USA, 2001.

RESULT OF SAMPLING EVALUATION

Does the sampling evaluation provide sufficient evidence to warrant further investigation?

|--|

Comments

Results of sampling indicated that a removal action should be performed.

Yes No Inconclusive

18. Was equipment used capable of detecting items suspected at the site at the maximum expected depth?			Inconclusive
Sources reviewed and comments Results of the ODDS indicate that for Category I and II items, the probability of debased on the seeded test trials. The probability of detection ranges from 27% to 5 it is less likely that the GA-52/Cx would be able to detect 81mm at their maximum found in MRS-10A have a penetration depth greater than the depth of detection.	5% for an 8	1mm proje	ctile; therefore,
References: Parsons, 2002			
19. Was equipment used capable of detecting the types of items (e.g., non-ferrous) suspected at the site?	Yes		
Sources reviewed and comments Equipment used was capable of detecting munitions with ferrous components tha	t were expe	cted at the	site.
References: Parsons 2002			
20. Do the results of the ODDS indicate that items suspected at the site would have been detected by the instrument used at the time of investigation?	Yes		
Sources reviewed and comments The Schonstedt Model GA-52/Cx was used for removal at MRS-10A and MRS-10 capable of detecting 81mm mortar projectiles (Category III/IV) suspected at the si capabilities decreases with depth.			
References: Parsons, 2002			
21. Do results of the investigation indicate that suspected items could be detected with a high level of confidence at observed and expected depth ranges?		No	
Sources reviewed and comments			

References:

Parsons, 2002; USA, 2001a; USA, 2001b

Items were located on the surface, to one-foot in portions of the sub-area, and to three feet in portions. According to ODDS, the probability of detection decreases with depth. The probability of detection ranges from 27% to 55% for the 81mm projectile; therefore, it is less likely that the GA-52/Cx would be able to detect 81mm at their maximum expected

depth. 37mm projectiles found in MRS-10A have a penetration depth greater than the depth of detection.

Evaluation of Previous Work: BLM Area B Sub-Area B-4 Evaluation Checklist Part 4: Removal Evaluation

22. Were all the instruments used to evaluate the site maintained and
calibrated in accordance with associated work plan and manufacturer's
specifications?

Yes	No	Inconclusive
Yes		

Sources reviewed and comments

During work performed by UXB, the Quality Control Specialist calibrated and recorded the operational condition of the equipment on a daily basis. Equipment was calibrated at a frequency recommended by the manufacturer. Prior to geophysical searches source material was utilized to verify the accuracy of the equipment. During work performed by USA/CMS, instruments and equipment requiring maintenance and/or calibration were checked prior to the start of each workday. Batteries were replaced as needed and the instruments were checked against a known source.

	re			

UXB, 1994a; USA, 2001a; USA 2001b

23. Was the appropriate data processing scheme used for the site, how was the data processed?

Sources reviewed and comments

Removal action was conducted utilizing analog detection equipment; therefore, no processing of data was required.

References:

UXB, 1994a; USA, 2001a; USA 2001b

24. Has the field data been collected and managed in accordance with quality control standards established for the project?

Yes	
-----	--

Sources reviewed and comments

The field data was collected and managed in accordance with the quality control standards established for the project.

References:

USA 2001a; USA 2001b; MACTEC/Shaw, 2011

RESULTS OF REMOVAL INVESTIGATION

A. Can the data be used to perform a risk assessment?

Yes	

Comments:

Review of the available data indicates that the data can be used for performance of the risk assessment. The uncertainties related to instrument detection efficiencies should be considered when performing the risk assessment.

B. Can the data be used to perform a feasibility study?

Yes		Т
103	Yes	

Comments:

Review of the available data indicates that the data can be used for performance of the feasibility study. The uncertainties related to instrument detection efficiencies and removal depth should be considered when performing the feasibility study.

Checklist C-17 Evaluation of Previous Work: BLM Area B Sub-Area B-5 Evaluation Checklist Part 3: Sampling Evaluation

Evaluation Checklist Part 3: Sampling Evaluation Yes Inconclusive Nο TYPE OF TRAINING AND MILITARY **MUNITIONS EXPECTED** 1. Is there evidence that the site was used as an impact area (i.e., fired No military munitions such as mortars, projectiles, rifle grenades and other launched military munitions)? Sources reviewed and comments MRS-12 was reportedly used as a firing point and a target for mortar projectiles, rifle grenades, and shoulder-launched projectiles in the 1940s and 1950s. The items found during HFA sampling, "twelve 40mm target practice (TP) cartridges (MD)", do not support the use of the area as a mortar target area or a target area for shoulder-launched projectiles. MRS-21 had no historical evidence indicating that the site was used as an impact area; results of UXB sampling did not indicate it was used as an impact area. References: USAEDH, 1997; HFA, 1994; UXB, 1995. 2. Is there evidence that training involved use of High Explosive (HE) or Nο Low Explosive (LE) items? Sources reviewed and comments Based on the results of the sampling at MRS-12 and MRS-21, training did not involve the use of HE or LE items. References: USAEDH, 1997 (ASR); HFA, 1994; UXB, 1995. 3. Is there evidence that training involved use of pyrotechnic and/or smoke producing items (e.g., simulators, flares, smoke grenades) but not Yes explosives? Sources reviewed and comments Flares, signals, and rifle-fired smoke grenades were found at MRS-21. No pyrotechnic or smoke producing items were found at MRS-12. References: USAEDH, 1997 (ASR); HFA, 1994; UXB, 1995. 4. Was sampling and/or reconnaissance performed within the appropriate Yes area? Sources reviewed and comments Sampling was performed within the intended MRS boundary. References: USAEDH, 1997 (ASR); HFA, 1994; UXB, 1995.

Sources reviewed and comments

Sampling was conducted within MRS-12 and MRS-21 identified MEC and MD items.

5. Does sampling indicate MEC and/or munitions debris are present at the

18. Was equipment used capable of detecting items suspected at the site at the maximum expected depth?	Yes			
Sources reviewed and comments Results of the ODDS study indicate that the Schonstedt Model GA-52/Cx is capable of detecting ferrous MEC or MD items if present at this site.				
References: Parsons, 2002				

Sources reviewed and comments

ferrous) suspected at the site?

Equipment used was capable of detecting munitions with ferrous components. It would be less effective in detecting non-ferrous material, therefore, detection of primarily non-ferrous items such as buried hand grenade fuzes would be limited. However, items such as hand grenade fuzes would likely be found at or near the surface, therefore, the reduced detection capability should not be significant.

19. Was equipment used capable of detecting the types of items (e.g., non-

Parsons, 2002

Inconclusive

Evaluation of Previous Work: BLM Area B Sub-Area B-5 Evaluation Checklist Part 4: Removal Evaluation

	Yes	No	Inconclusive
20. Do the results of the ODDS indicate that items suspected at the site			
would have been detected by the instrument used at the time of	Yes		
investigation?			

Sources reviewed and comments

Schonstedt Model GA-52/Cx is capable of detecting grenades (hand and rifle) and 81mm mortar projectiles (Category III/IV) suspected at MRS-12; however, the instruments capabilities decreases with depth.

References:

Parsons, 2002.

21. Do results of the investigation indicate that suspected items could be detected with a high level of confidence at observed and expected depth ranges?

Sources reviewed and comments

Results of the ODDS suggest that the equipment used should be able to detect ferrous MEC at shallow depths. Items found at sub-area B-5 are primarily surface items (flares, signals, firing devices or fuzes) or items that would be expected to penetrate less than 6 inches (rifle fired smoke grenades) or be buried near the surface (practice landmines).

References:

Parsons, 2002; Shaw 2010.

22. Were all the instruments used to evaluate the site maintained and calibrated in accordance with associated work plan and manufacturer's specifications?

Yes

Sources reviewed and comments

During work performed by UXB the Quality Control Specialist calibrated and recorded the operational condition of the equipment on a daily basis. Equipment was calibrated at a frequency recommended by the manufacturer. Prior to geophysical searches source material was utilized to verify the accuracy of the equipment. During work performed by USA/CMS, instruments and equipment requiring maintenance and/or calibration were checked prior to the start of each workday. Batteries were replaced as needed and the instruments were checked against a known source.

References:

UXB, 1995a; UXB, 1995b; USA, 2000a.

23. Was the appropriate data processing scheme used for the site, how was the data processed?

S		Not Applicable

Sources reviewed and comments

Data were collected using Schonstedt magnetometers. Schonstedt magnetometers are analog so no digital data was collected for processing.

References:

UXB, 1995a; UXB, 1995b; USA, 2000a.

24. Has the field data been collected and managed in accordance with quality control standards established for the project?

Yes

Sources reviewed and comments

The field data was collected and managed in accordance with the quality control standards established for the project.

ESTABLISHMENT OF SITE BOUNDARIES			
6. Is there evidence of training areas on <u>aerial photographs</u> that could be used to establish boundaries?		No	
Sources reviewed and comments The range is not evident on 1960s, 1970s, and 1980s aerial photographs.			
References: Aerial photographs dated 1966, 1975, 1978, 1986, 1989, MACTEC/Shaw 2011a			
7. Is there evidence of training on <u>historical training maps</u> that could be used to establish boundaries?	Yes		
Sources reviewed and comments Range P-5 is shown on historical training maps from 1972 through 1987.			
References: Army, 1972; 1977; 1980; 1984; 1987. MACTEC/Shaw, 2011a			
8. Should current boundaries be revised?		No	
Sources reviewed and comments There is no evidence to support changing the boundaries of the site based on reviewed.	ew of historica	al document	S.
References: See above for questions 6 and 7.			
RESULTS OF LITERATURE EVALUATION			
Does the literature review provide sufficient evidence to warrant further investigation?	Yes		

Comments

The interview records and historical training maps all identified that training with sub-caliber projectiles occurred within the boundaries of MRS-14D, indicating that the site warranted further investigation.

Parsons, 2002; USA, 2001a, USAEDH, 1997b

20. Do the results of the ODDS indicate that items suspected at the site would have been detected by the instrument used at the time of investigation?

Sources reviewed and comments

The results of the ODDS seeded test indicate that the types of items suspected or detected at MRS-14D, (primarily 22mm and 14.5mm subcaliber projectiles) and used in the ODDS study were detectable using a Schonstedt 52CX; however, the detection rates decrease with depth. Because the 22mm subcaliber projectiles can penetrate deeper than the estimated detection depth, it is possible that deeper penetrating 22mm subcaliber projectiles would not be detected by the Schonstedt 52Cx.

Review of the available data indicates that the data can be used for performance of the feasibility study. The uncertainties related to instrument detection efficiencies should be considered when performing the feasibility study.

BLM Area B Remedial Investigation/Feasibility Study

Use of Prescribed burns BLM Area B

Site Survey

Site survey of BLM Area B was performed March 13 and 14, 2013 to determine the control lines for the prescribed burn units with in the area. Roads were evaluated for fire line control purposes and trails were evaluated to determine the feasibility to constructing roads if necessary for control lines and fire equipment access.

The fire control lines were evaluated with assistance from POM Fire and criteria for the control line location were considered.

Evaluation Criteria for burn control lines

- Fire Fighter safety during burn operations
- Limited environmental damage if it is necessary to develop roads or control lines
- Line location that would prevent a fire escape
- Limit the cost of any necessary road construction
- Areas to be masticated
- Alternatives to areas not recommended for burning

Mastication Criteria: The Hazard Frag Distance (HFD) used for this analysis to determine the width of the mastication around the units was determined by conversation with Erin Caruso and Brad Olson of ITSI. The following is a copy of the determination from Brad Olson's email answering my question on the HFD for the BLM_B area.

"Using the 4.5" rocket is the most conservative from a safety perspective. Usually the HFD is selected based on the largest HFD for an area. You could have no HFD for the areas that have already been remediated. In the case of Area B North you could have a different HFD for each unit worked in. However this gets very confusing for all users and not very practical, so I would recommend 1 distance for the entire site."

The HFD for the 4.5"rocket found in the west side of MRS-10A is 316 feet, which is used in the determination of the amount of mastication and analysis for the burn units within BLM B

The site survey and further analysis were used to determine the burn unit boundaries and what should be eliminated from burning based on the criteria above.

Areas recommended to be eliminated from burning

There are two areas of BLM B that are recommend not to be burned as standing vegetation they could be burned at a later time if masticated. This report is recommending that nothing be done to those areas from a prescribed burn stand point for the following reasons:

Area one recommended for elimination from burning

Area B-2A (Figure 1) should probably be eliminated from burning for the reasons:

- A road would need to be constructed along the southern boundary of the unit which would be extensive due to the erosion and the rehab that already has been done
- With the Hazardous Frag Distance of 316 feet the mastication from the control lines in would probably masticate most of the unit to be burned
- Would recommend that the Coastal Oak vegetation be limbed up and cleared under it to protect the vegetation from being damaged or destroyed by the burn
- Resent rehab of the road and trail along the southern boundary would be completely eliminated by the road construction

Figure 1: Map of Area B-2A

Area Two recommended for elimination from burning: Part of Area B-1 and B3 (Figure 2) to the east of Hennekens Ranch road be eliminated from burning for the following reasons:

- Trail 66 would need to be brought up to standard for fire equipment
- With the Hazardous Frag Distance(HFD) of 316 feet the mastication from the control lines in would probably masticate most of the unit to be burned
- Much of the area vegetation is grass and coastal oak vegetation leaving only a small portion once the mastication is completed, prescribed burn acreage
- Fire in the oak stands would kill many of the oak trees which has been the case in areas previously burned and the trees not cleared of vegetation in the tree understory. These oaks can survive low intensity burns but will not survive the high intensity burns where mixed with chaparral as evident in the areas just north of the eastern portion of Machine gun flats/
- There is a road system that could be used to burn the two small brush areas, however, if the recommended HFD of 316 feet is implemented the mastication would eliminate the two areas leaving little to be burned.

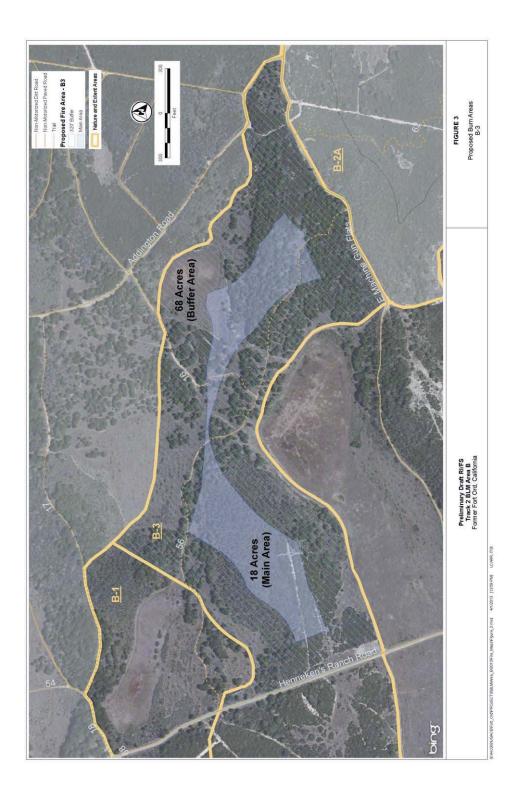

Figure 2: Map of area B-1 and B-3 to be eliminated from burning

Areas that are recommended for burning

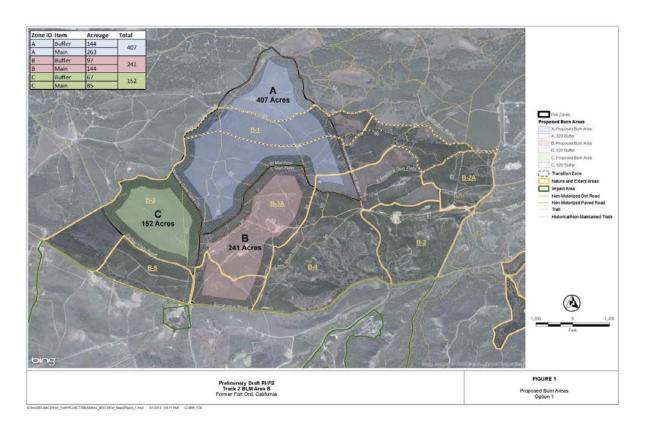

Figure 3: Map of Areas that can be burned

There are three areas in BLM_B that can be burned with minimum preparation referred to in this document as, Burn area A, B, and C

Area C will be addressed first it is the area with well-established roads around it and would only require mastication to the recommended HFD. BLM has developed the roads that are the boundary around burn unit area C these roads need only minor maintenance to keep them useful for the burn operations. Mastication along the roads to the recommended HFD 319 feet would be acceptable to provide for safe burn operations

Area B would require the reconstruction of a road (Trail 67) on the eastern boundary of the unit that runs from Machine gun Flats to Eucalyptus road and placement of rock to stabilize the road. This road construction is approximately 6,250 feet with most of the work on the lower half where erosion has occurred. The road (Trail 2) West Machine Gun Flats Road on the northwestern and north boundary of the unit needs very little work and is passable; the length of this portion is approximately 4664 feet. Watkins gate road borders the unit on the west and Eucalyptus Road borders the unit on the south. Then mastication to the recommended HFD (316 feet) is required around the unit

Area A: Has three alternatives for unit boundaries or primary control lines

Alternative 1: Figure 3 and Figure 6 the boundaries would have the least impact on the vegetation an provide the most logical placement for control lines, however, the very northern portion of the unit goes outside the BLM_B area. As part of the alternative it is recommended that the coastal oak vegetation on the northern portion of the unit should be cleared underneath the oaks and the oaks limbed up to protect them from being burned. The clearing will allow for UXO removal and prevent the Oaks from damage in the event the burn would get into that area. If that is done a small portion of Coastal chaparral which is inside the BLM_B area could be burned.

Alternative 2: Would keep the recommendations in Alternative 1 but in addition Trail 67 could be used as a temporary control line if the brush was masticated along the trail as a stop gap measurement to hold the fire. However, equipment could not be put on the trail suppression would have to rely on the helicopters to slow or stop the fire from crossing the trail. This would not eliminate the necessity of mastication along Watkins Gate Road and Hennekens Ranch Road to the north of Trail 67. Trail 67 could be masticated up to 100 feet north of the trail which could help to prevent the burn from crossing Trail 67.

Alternative 3: To bring the northern boundary of Unit A back into the unit as shown in Figure 7 would require road construction along trail 67 approximately 3,500 feet of road construction and rock surface. This boundary would require major road construction and has several draw backs. Trail or what was once a military road has been completely rehabilitated and turned into a trail as shown in Figures 4 and Figure 5 (pictures). The trail would require a great deal of work to reconstruct it into a road for fire equipment and a large amount of rock would be necessary to stabilize the road bed and then rehabilitate the road back into a trail again after the burn is completed. The reduction in burn acres would be possible with this alternative at a much higher cost to construct the control lines around the unit.

Alternative 1 meets the criteria for the control lines which were established for this review:

- Fire Fighter safety during burn operations
- Limited environmental damage if it is necessary to develop roads or control lines
- Line location that would prevent a fire escape

• Limit the cost of any necessary road construction

Figure 4: Photo of Trail 67 at Watkins Gate Road

Figure 5: Picture of Trail 67 just off of Watkins Gate Road area that has rehabilitation work and erosion potential

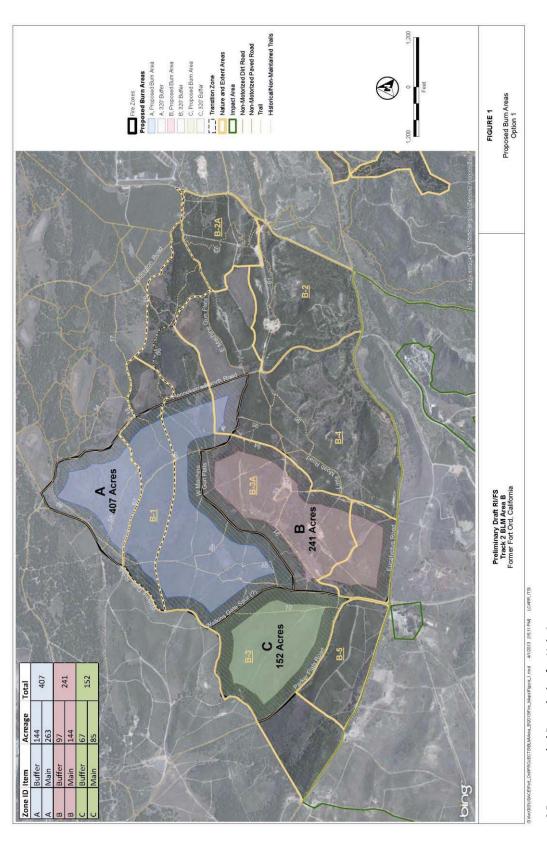

Figure 6 Recommended Boundaries for Unit A

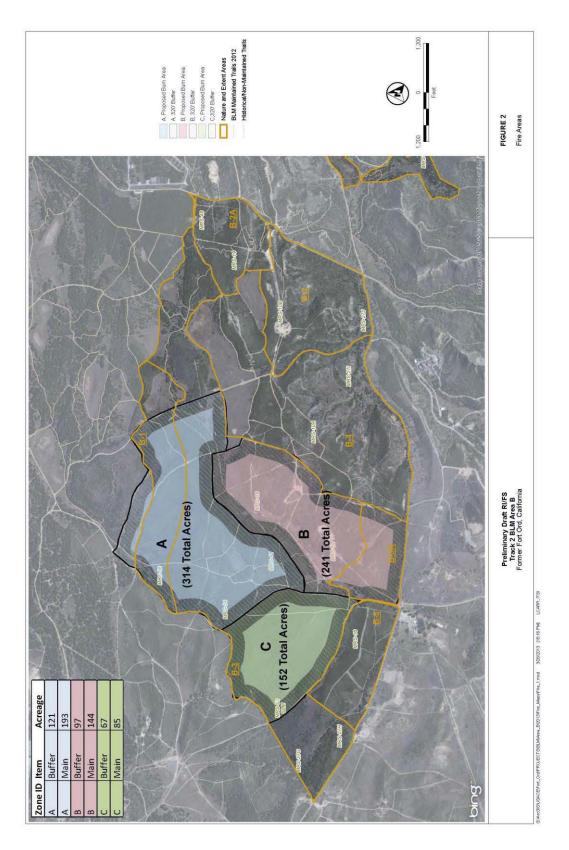

Figure 7: Most expensive alternative

Expected Fire Behavior

The typical vegetation type to be burned is Coastal Chaparral in Areas A, B, and C the chaparral is between 3 to 6 feet tall. Fuel Model is Shrub 7 or 147 which is described as very high loading dry climate Shrub

Figure 8: typical chaparral vegetation in the background

Behave Fire Behavior outputs are: ROS rate of spread in Chains per hour (a chain equals 66 feet), Flame length in feet and heat per unit Area. The Fire Behavior is based on the prescription employed for all of the burns inside the Impact Area the following fire behavior out puts for the worst case scenarios.

20-ft Wind	ROS (max)	Heat per Unit Area	Flame Length	Midflame Wind Speed
mi/h	ch/h	Btu/ft2	ft	mi/h
14	85.3	2324	19.5	7.0
16	98.3	2324	20.9	8.0
18	111.6	2324	22.1	9.0
20	125.2	2324	23.3	10.0
22	139.0	2324	24.5	11.0
24	153.0	2324	25.6	12.0
26	167.2	2324	26.6	13.0

Emissions Calculations

The emissions were calculated using First Order Fire Effects Model 5 the model run for the vegetation is found in Appendix A. The table below is the emissions calculations per acre of vegetation burned.

Emissions lbs/acre flaming smoldering total	
PM 10 81 10 91	
PM 2.5 69 8 77	
CH 4 21 5 26	
CO 173 109 282	
CO 2 47139 443 47582	
NOX 85 0 85	
SO2 27 0 27	

			Cor	nsumption	Duration
				tons/acre	hour:min:sec
			Flaming:	13.25	00:04:00
			Smoldering:	0.18	00:16:45
			Total:	13.43	
Unit	Average	Combustion	Efficiency:	0.97	

The following table lists the total emissions for PM 10 and PM 2.5 for each of the proposed units to be burned. These calculations include the masticated area as well as the standing brush areas. Past experience has shown that not all of the masticated area burns on the day of the main burn.

Smoke Emissions BLM_B Units						
Unit Number	Vegetation	Acr es	Emissions type	Pounds/Ac re	Total Tons of Emissions	
A	Coastal Maritime Chaparral	407	PM 10	91	18.5	
	PM 2.5 is part of PM10		PM 2.5	77	15.6	
A alt 2	Coastal Maritime Chaparral	314	PM 10	91	14.2	
	PM 2.5 is part of PM 10		PM 2.5	77	12	
В	Coastal Maritime Chaparral	241	PM 10	91	10.9	
	PM 2.5 is part of PM10		PM 2.5	77	9.2	
С	Coastal Maritime Chaparral	152	PM 10	91	6.9	
	PM 2.5 is part of PM 10		PM 2.5	77	5.8	

Recommended Conclusion

The site survey was done by Barry Callenberger ITSI contract burn boss for the Fort Ord Burn program and Scott Hudock, Division Chief of the Presidio of Monterey Fire Department and Incident Commander for the Fort Ord Burn program. The conclusion of the site visit and this report are the basis for the conclusions for the BLM B burn units.

Evaluation Criteria for burn control lines

- Fire Fighter safety during burn operations
- Limited environmental damage if it is necessary to develop roads or control lines
- Line location that would prevent a fire escape
- Limit the cost of any necessary road construction
- Areas to be masticated
- Alternatives to areas not recommended for burning

Keeping the evaluation criteria for the burn control lines the following recommendations are that the burns can be conducted as described:

Burn Area A alternative one is the recommended burn unit

Alternative 1: Figure 3 and Figure 6 the boundaries would have the least impact on the vegetation an provide the most logical placement for control lines, however, the very northern portion of the unit goes outside the BLM_B area. As part of the alternative it is recommended that the coastal oak vegetation on the northern portion of the unit should be cleared underneath the oaks and the oaks limbed up to protect them from being burned. The clearing will allow for UXO removal and prevent the Oaks from damage in the event the burn would get into that area. If that is done a small portion of Coastal chaparral which is inside the BLM_B area could be burned.

Areas B and C as described in the document would be the preferred burn units to be burned

Area B would require the reconstruction of a road (Trail 67) on the eastern boundary of the unit that runs from Machine gun Flats to Eucalyptus road and placement of rock to stabilize the road. This road construction is approximately 6,250 feet with most of the work on the lower half where erosion has occurred. The road (Trail 2) West Machine Gun Flats Road on the northwestern and north boundary of the unit needs very little work and is passable; the length of this portion is approximately 4664 feet. Watkins gate road borders the unit on the west and Eucalyptus Road borders the unit on the south. Then mastication to the recommended HFD (316 feet) is required around the unit

Area C is the area with well-established roads around it and would only require mastication to the recommended HFD. BLM has developed the roads that are the boundary around burn unit area C these roads need only minor maintenance to keep them useful for the burn operations. Mastication along the roads to the recommended HFD 319 feet would be acceptable to provide for safe burn operations

Area A could be burned in one burn period. Area B and C could be burned in one burning period or broken into 2 burn periods.

All of the same precautions and mitigations for burning in the impact area would need to be followed. Equipment requirements for the burns would be the same as has been required for the 2013 burn. Burn prescriptions for BLM_B would also be the same as the prescription for the 2013 burn new wind directions for smoke dispersion will need to be reviewed with the Air District and the BRAC meteorologist to make certain that the smoke will have a minimal impact on the public. The BLM_B area smoke may impact areas that have not been impacted in the previous 10 years. The requirements and precautions for the Fort Ord burns that were developed over the years of burning in the impact area would still apply to the areas in BLM_B.

BLM Area B Sub-Area B-3, Northeast

Date: May 29, 2014

From: Barry Callenberger, Wildland Rx

1 EVALUATION OF NORTHEAST SUB-AREA B-3 TO BURN OR MASTICATE

Like the other units in the northeastern corner of sub-areaB-3, the unit is narrow and not conducive to burning. Once the required roads are constructed and the required mastication is completed for firefighter safety along the roads there will be very little remaining of standing vegetation to allow for a safe burn with good smoke dispersion. My recommendation is to completely masticate the area if MEC removal were to be conducted. The unit to the east (Future East Garrison MRA) was masticated and surface removal completed. However, I recommended against burning even the mastication due to the close proximity of private developments to the east and north of that site. The terrain to the north and east makes it difficult to stop an escape fire before it reaches the developed areas.

Sub-area B-6	100	6%	\$899	\$59,907	\$60,806
MRS-16	81	5%	\$724	\$48,283	\$49,008
	1676	100%	\$15,000	\$1,000,000	\$1,015,000

- 1. Capital costs for public education include the preparation of a brochure and the construction of three kiosks to describe the historical use of BLM Area B and to advise visitors to stay on the roads and trails.
- 2. Annual costs for public education include one-third full time equivalent (FTE) of a GS-9 to administer the BLM Area B and MRS-16 public education program, 10,000 copies of the public education brochure, and annual maintenance of the three kiosks.
- 3. Construction support and MEC recognition training will be provided by two UXO-qualified personnel. Cost of two UXO-qualified personnel is included in the remedy for the Impact Area MRA, and is assumed to be sufficient to provide UXO support for BLM Area B and MRS-16. Therefore, no additional costs are included in this cost estimate.
- 4. EPA provided guidelines in OSWER Directive 9355.0-75 for estimating remedial alternative costs in Circular No. A-94, Guidelines and Discount Rates for Benefit -Cost Analysis of Federal Programs, Appendix C, President's Federal Office of Management and Budget (OMB, January 2013) (www.whitehouse.gov) (January 2013, updated yearly). The guidelines for federal projects were applied for estimating the Net Present Value based on annual costs for project durations of 30 years using a rate of return of 3%.
- 5. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

- 1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-1. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-1. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-1.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment line assumes two masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.

Table E-3. Sub-Area B-1, Alternative 3, Technology-Aided Surface MEC Remediation, With Subsurface MEC Remediation in Select Areas, and Land Use Controls Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes
2 000	~~~~~	•	•		

- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Surface MEC removal following the prescribed burn assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.
- 14. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 15. Reacquisition of digital targets assumes 10% of the total acreage will require subsurface removal. Assumes 9% of the total acreage contains 50 anomalies per acre. Assumes one reacquisition team at \$2830 per team day can reacquire 100 anomalies per day.
- 16. Target removal assumes each team can perform 75 digs per day. Assumes one team of two UXO techs and a field geophysicist for \$4423 per team day.
- 17. Analog removal assumes that 1% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes one UXO team at \$8000 per team day covering 0.25 acres per day.
- 18. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 19. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 20. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 21. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Assumes wetlands monitoring would not be required for sub-area B-1 under Alternative 3.
- 22. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

- 1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-2. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-2. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-2.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment line assumes two masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.

Table E-5. Sub-Area B -2, Alternative 3, Technology-Aided Surface MEC Remediation, With Subsurface MEC Remediation in Select Areas, and Land Use Controls Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes
2 000	~~~~~	•	•		

- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes two masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Surface MEC removal following the prescribed burn assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.
- 14. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 15. Reacquisition of digital targets assumes 10% of the total acreage will require subsurface removal. Assumes 9% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 16. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 17. Analog removal assumes that 1% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 18. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 19. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 20. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 21. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Baseline vegetation monitoring has been completed for sub-area B-2. Assumes wetlands monitoring would not be required for sub-area B-2 under Alternative 3.
- 22. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

Notes:

1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.

Table E-6. Sub-Area B-2, Alternative 4, Subsurface MEC Remediation Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description Quantity Unit Unit Price Total Notes

- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-2. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-2. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-2.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment line assumes two masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes two masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Surface MEC removal following the prescribed burn assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.
- 14. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 15. Reacquisition of digital targets assumes 100% of the total acreage will require subsurface removal. Assumes 90% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.

- 1. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-2A. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-2A. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-2A.
- 2. Vegetation cutting assumes two masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 3. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work.
- 4. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 5. Survey (grid & boundary) includes the GPS survey and staking of the boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 6. Surface MEC removal assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the cut vegetation.
- 7. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 8. Reacquisition of digital targets assumes 90% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 9. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.

Table E-8. Sub-Area B-2A, Alternative 4, Subsurface MEC Remediation Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes
item bescription	Qualitity	Oilit	Office Frice	iotai	140163

- 10. Analog removal assumes that 10% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 11. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 12. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft final, and final.
- 13. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 14. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Baseline vegetation monitoring has been completed for sub-area B-2A. Assumes wetlands monitoring would not be required for sub-area B-2A.
- 15. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

					_
Total 30 Year Annual Costs				\$429,000	
Total Remedial Alternative Cost				\$21,922,000	23

- 1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-3. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-3. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-3.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment lines and in the unburned portions assumes three masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.

Table E-9. Sub-Area B-3, Alternative 3, Technology-Aided Surface MEC Remediation, With Subsurface MEC Remediation in Select Areas, and Land Use Controls Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes

- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes three masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Following the prescribed burn, site reconnaissance will be performed in the area north of BLM Area B. Costs for conducting site reconnaissance includes \$8000 per team day at a pace of 8 acres per day.
- 14. Surface MEC removal following the prescribed burn assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.
- 15. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 16. Reacquisition of digital targets assumes 10% of the total acreage will require subsurface removal. Assumes 9% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 17. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 18. Analog removal assumes that 1% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 19. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 20. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 21. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 22. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Assumes wetlands monitoring would not be required for sub-area B-3 under Alternative 3.
- 23. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

dunitity one file form	Item Description	Quantity	Unit	Unit Price	Total	Notes
------------------------	------------------	----------	------	-------------------	-------	-------

- 1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-3. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-3. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-3.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment lines and in the unburned portions assumes three masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes three masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Following the prescribed burn, site reconnaissance will be performed in the area north of BLM Area B. Costs for conducting site reconnaissance includes \$8000 per team day at a pace of 8 acres per day.
- 14. Surface MEC removal following the prescribed burn assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.
- 15. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.

Table E-10. Sub-Area B-3, Alternative 4, Subsurface MEC Remediation Cost Estimate
BLM Area B and MRS-16, Track 2 Feasibility Study
Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes

- 16. Reacquisition of digital targets assumes 100% of the acreage will require subsurface removal. Assumes 90% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 17. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 18. Analog removal assumes that 10% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 19. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 20. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 21. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 22. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Assumes wetlands monitoring would not be required for sub-area B-3 under Alternative 3.
- 23. If remedial activities disturb more than 5% or 10 square feet (whichever is less) of total surface area within the wetland, baseline and follow up annual monitoring are required for 5 years as described in the 2006 wetland restoration and monitoring plan. There are 3 ponds within Area A (41, 44, and 103), totaling 2.5 acres. Baseline requirements for these ponds have not been completed.
- 24. There are 7 ponds within Area B (3 North, 3 South, 35, 39, 40 North, 40 South, and 43), totaling 2.2 acres. Pond 3 South is on a borderline with Area B-3A. Baseline requirements for these ponds have been completed.
- 25. There are no ponds within Area C.
- 26. There is 1 pond within the uncut areas of B-3 (pond 60), totaling 1.9 acres. Baseline for this pond has not been completed.
- 27. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

Table E-11. Sub-Area B-3A, Alternative 3, Technology-Aided Surface MEC Remediation, With Subsurface MEC Remediation in Select Areas, and Land Use Controls Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment line assumes two masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.

Table E-11. Sub-Area B-3A, Alternative 3, Technology-Aided Surface MEC Remediation, With Subsurface MEC Remediation in Select Areas, and Land Use Controls Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes

- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes two masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Surface MEC removal following the prescribed burn assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.
- 14. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 15. Reacquisition of digital targets assumes 10% of the total acreage will require subsurface removal. Assumes 9% of the subsurface removal area contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 16. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 17. Analog removal assumes that 1% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 18. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 19. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 20. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 21. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Assumes wetlands monitoring would not be required for sub-area B-3A under Alternative 3.
- 22. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

- 1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-3A. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-3A. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-3A.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment lines and in the unburned portions assumes two masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes two masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Surface MEC removal following the prescribed burn assumes two UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 4 acres per day within the burned area.

	٦٠٠٠٠٠)				

- 14. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 15. Reacquisition of digital targets assumes 100% of the total acreage will require subsurface removal. Assumes 90% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 16. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 17. Analog removal assumes that 10% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 18. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 19. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 20. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 21. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities.
- 22. If remedial activities disturb more than 5% or 10 square feet (whichever is less) of total surface area within the wetland, baseline and follow up annual monitoring are required for 5 years as described in the 2006 Wetland Restoration and Monitoring Plan. There are 3 ponds within sub-area B-3A (3 North, 3 South, and 35), totaling 1.2 acres. Baseline requirements for these ponds have been completed.
- 23. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

---------------------------	------------------	----------	------	-------------------	-------	-------

Notes:

- 1. The costs for Prescribed Burn Manager, meteorological support, and the Burn Boss and Air Operations Manager are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 2. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-4. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-4. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-4.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting in the containment line assumes three masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Surface MEC removal within the containment line assumes three UXO teams at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the containment line.
- 6. Prescribed burn costs include aerial communications, helicopters for ignition and suppression, ground crews for fire management, field support for maintaining equipment and managing personnel, and water trucks and drivers for suppression activities. These costs are based on the current requirements for conducting a burn within the Impact Area MRA.
- 7. The costs for community relations related to prescribed burning includes newspaper advertisements, targeted mailing, and direct community notification. These costs are based on recent Fort Ord specific data for prescribed burns in the Impact Area MRA.
- 8. Air sampling and management costs include the personnel to prepare a sampling and analysis plan, the personnel, equipment, and analytical costs to perform air monitoring during the prescribed burn, and the cost of reporting the data after the burn.
- 9. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work before and after the prescribed burn.
- 10. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 11. Survey (grid) includes the GPS survey and staking of the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 12. Vegetation cutting after the prescribed burn assumes 75% of the vegetation will require a single cut (\$650 per acre) and 25% of the vegetation will require a double cut (\$800 per acre). Assumes three masticators with one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 13. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 14. Reacquisition of digital targets assumes 100% of the total acreage will require subsurface removal. Assumes 90% of the total acreage contains 50 anomalies per acre. Assumes three reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.

Table E-14. Sub-Area B-4, Alternative 4, Subsurface MEC Remediation Cost Estimate
BLM Area B and MRS-16, Track 2 Feasibility Study
Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes
•					

- 15. Target removal assumes each team can perform 75 digs per day. Assumes three teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 16. Analog removal assumes that 10% of the subsurface removal area contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO team at \$8000 per team day covering 0.25 acres per day.
- 17. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 18. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, a Prescribed Burn Plan, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft, draft final, and final.
- 19. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 20. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities.
- 21. If remedial activities disturb more than 5% or 10 square feet (whichever is less) of total surface area within the wetland, baseline and follow up annual monitoring are required for 5 years as described in the 2006 wetland restoration and monitoring plan. There are 3 ponds within sub-area B-4 (Machine Gun Flats, Pond 42, and Pond 61), totaling 11.8 acres. Baseline requirements for ponds 42 and Machine Gun Flats have been completed, but not for Pond 61.
- 22. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

activities with the Army. It is assum	ed for this estimate	that the proje	ect management te	am would b	е

spending one-third of its time overseeing the activities associated with sub-area B-5.

- 2. Vegetation cutting surrounding Mudhen Lake assumes one masticator costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 3. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work.
- 4. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-5. It is assumed for this estimate that the site-specific data management team would not be required for the dewatering task. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-5.
- 5. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 6. Dewatering of Mudhen Lake is assumed to require pumping of the water from the lake onto the surface drainage area to be designated by BLM. Equipment costs include pumps, hosing, fuel, support trucks, and electricity. The cost assumes one month to dewater the lake and one month standby during the surface MEC removal.
- 7. MEC Escort activities would include one UXO Tech overseeing the operations of dewatering Mudhen Lake.
- 8. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 9. Surface MEC removal assumes one UXO team at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the dewatered areas.
- 10. Analog removal assumes that 10% of the site will require analog removal. Assumes one UXO team at \$8000 per team day covering 0.25 acres per day.
- 11. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 12. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft final, and final.
- 13. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 14. There is approximately 15 acres of CMC habitat in sub-area B-5. It is assumed that these areas would not be disturbed for Alternative 3.
- 15. If remedial action activities disturb less than 5% or 10 square feet of total surface area within the wetland, baseline and follow up annual monitoring in years 1, 3, and 5 are required as described in the 2006 Wetland Restoration and Monitoring Plan. Baseline survey for Mudhen Lake has been completed.
- 16. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

Notes:

1. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending half of its time overseeing the activities associated with sub-area B-5. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending half of its time reporting the activities associated with sub-area B-5. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-5.

Table E-16. Sub-Area B-5, Alternative 4, Subsurface MEC Remediation Cost Estimate BLM Area B and MRS-16, Track 2 Feasibility Study Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes

- 2. Vegetation cutting assumes one masticator costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 3. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work.
- 4. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 5. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the field work. It is assumed for this estimate that the site management team would be spending half of its time overseeing the activities associated with sub-area B-5. It is assumed for this estimate that the site-specific data management team would not be required for the dewatering task. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending a third of its time overseeing the activities associated with sub-area B-5.
- 6. Dewatering of Mudhen Lake is assumed to require pumping of the water from the lake onto the surface drainage area to be designated by BLM. Equipment costs include pumps, hosing, fuel, support trucks, and electricity. The cost assumes one month to dewater the lake and one month standby during the surface MEC removal.
- 7. MEC Escort activities would include one UXO Tech overseeing the operations of dewatering Mudhen Lake.
- 8. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 9. Surface MEC removal assumes one UXO team at a cost of \$8000 per team day. It is assumed that each UXO team can cover 2.5 acres per day within the dewatered areas. Surface removal has been conducted on the remainder of sub-area B-5.
- 10. Digital Geophysical Survey assumes one towed array surveying all of the property except Mudhen Lake. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 11. Reacquisition of digital targets assumes 100% of the total acreage will require subsurface removal. Assumes 90% of the total acreage contains 50 anomalies per acre. Assumes two reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 12. Target removal assumes each team can perform 75 digs per day. Assumes two teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 13. Analog removal for the areas of sub-area B-5 not including Mudhen Lake assumes that 10% of the site contains either a higher density of anomalies or areas inaccessible to DGM and will require analog removal. Assumes two UXO teams at \$8000 per team day covering 0.25 acres per day.
- 14. Analog removal within Mudhen Lake assumes that 10% of the site will require analog removal. Assumes one UXO team at \$8000 per team day covering 0.1 acres per day in the dewatered area.
- 15. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 16. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft final, and final.

Table E-16. Sub-Area B-5, Alternative 4, Subsurface MEC Remediation Cost Estimate

BLM Area B and MRS-16, Track 2 Feasibility Study

Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes

- 17. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army. Invasive species control is expected for all areas except within Mudhen Lake (43 acres 11.4 acres = 31.6 acres).
- 18. There are approximately 15 acres of CMC habitat in sub-area B-5. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities.
- 19. Mudhen Lake is approximately 11.4 acres. If remedial activities disturb more than 5% or 10 square feet (whichever is less) of total surface area within the wetland, baseline and follow up annual monitoring are required for 5 years as described in the 2006 Wetland Restoration and Monitoring Plan. Baseline requirements for Mudhen Lake have been completed.
- 20. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

Total Capital Cost				\$2,527,000]
Total Remedial Alternative Cost				\$2,527,000	14

Notes:

- 1. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with sub-area B-6. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with sub-area B-6. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with sub-area B-6.
- 2. Vegetation cutting in the containment line assumes three masticators costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 3. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work.
- 4. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 5. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 6. Surface MEC removal is complete at sub-area B-6. Digital Geophysical Survey assumes one towed array. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 7. Reacquisition of digital targets assumes 100% of the total acreage will require subsurface removal. Assumes 100% of the total acreage contains less than 50 anomalies per acre. Assumes three reacquisition teams and with each team at \$2830 per team day can reacquire 100 anomalies per day.
- 8. Target removal assumes each team can perform 75 digs per day. Assumes three teams of two UXO techs and a field geophysicist for \$4423 per team day.
- 9. Analog removal assumes that 10% of the site will contain areas inaccessible to DGM and will require analog removal. Assumes two UXO teams at \$8000 per team day covering 0.25 acres per day.
- 10. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.

Table E-17. Sub-Area B-6, Alternative 4, Subsurface MEC Remediation Cost Estimate

BLM Area B and MRS-16, Track 2 Feasibility Study

Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes
	,				

- 11. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft final, and final.
- 12. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 13. Approximately 2 acres of CMC habitat exists in sub-area B-6. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. Wetlands Monitoring is assumed to not be required because there are no ponds in sub-area B-6.
- 14. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

Notes:

- 1. Site management is the Senior UXO Supervisor, UXO Quality Control Supervisor, and the UXO Safety Officer for oversight of the UXO teams conducting the field work. It is assumed for this estimate that the site management team would be spending one-half of its time overseeing the activities associated with MRS-16. Site-specific data management includes the management of the data from the UXO teams and the daily reporting of data and progress through GIS maps and databases to the Army. It is assumed for this estimate that the site-specific data management team would be spending one-half of its time reporting the activities associated with MRS-16. Project management includes the overall management of the site management team, the site-specific management team, procuring subcontractors, and coordinating activities with the Army. It is assumed for this estimate that the project management team would be spending one-third of its time overseeing the activities associated with MRS-16.
- 2. Temporary perimeter fencing will be used where required to secure the site during the period of MEC remedial action to prevent possible public exposure.
- 3. Survey (grid and boundary) includes the GPS survey and staking of the site boundary and the 100-foot by 100-foot grids. This estimate assumes a two-person team covering approximately 20 acres per day.
- 4. Vegetation cutting assumes one masticator costing \$800 per acre and one UXO Tech II per masticator at \$1250 per day at 2.5 acres per day.
- 5. Excavation of the "saturated grids" within MRS-16 is assumed to require a site superintendent and an operator to run an excavator, a trommel for screening, a water truck, and additional support equipment.
- 6. MEC Escort activities would include two UXO Techs overseeing the excavation.
- 7. Digital Geophysical Survey assumes one towed array for surveying the bottom of the excavation. Cost for conducting DGM includes \$4700 per team day, 3.2 acres per day, and \$250 for the towed array.
- 8. Reacquisition of digital targets assumes 100% of the total acreage will require subsurface removal. Assumes 100% of the total acreage contains less than 25 anomalies per acre. Assumes one reacquisition team at \$2830 per team day can reacquire 100 anomalies per day.
- 9. Target removal assumes each team can perform 75 digs per day. Assumes one team of two UXO techs and a field geophysicist for \$4423 per team day.
- 10. Cost of detonating MPPEH and certifying and disposing of MD are based on recent Fort Ord specific data.
- 11. Site restoration costs include erosion control and habitat restoration.
- 12. Site security costs include the cost of two security personnel to manage access points for 12 hour shifts during the field work.

Table E-18. MRS-16, Alternative 4, Subsurface MEC Remediation Cost Estimate
BLM Area B and MRS-16, Track 2 Feasibility Study
Former Fort Ord, California

Item Description	Quantity	Unit	Unit Price	Total	Notes

- 13. Reporting includes the preparation of a site-specific work plan, a new or revised Explosives Safety Submission, and a Remedial Action Completion Report after the work is complete. All reports are assumed to require four versions -- preliminary draft, draft final, and final.
- 14. Post-remediation habitat management includes invasive species control for a period of five years. Unit cost is based on the current cost of invasive species control in the Impact Area MRA conducted by BLM under a service agreement with the Army.
- 15. According to the HMP and USFWS Biological Opinions, remediation sites require a baseline survey prior to remediation. Annual species need to be monitored in years 1, 3, 5, and 8 after the remediation. Shrub species must be monitored in years 3, 5, 8, and 13 following remediation. The costs provided are based on recent Fort Ord specific data for survey and reporting of habitat monitoring activities. MRS-16 contains no ponds; therefore, it is assumed wetlands monitoring would not apply.
- 16. These costs are for comparison and have an accuracy of +50/-30%. The totals are rounded to the nearest \$1000.

RI is generally performed concurrently and in an interdependent fashion with the feasibility study. Source: (3).

Removal Depth: The depth below ground surface to which all ordnance and other detected items are removed. Source: (1).

SiteStats/GridStats: Programs developed by QuantiTech for the Huntsville USACE to predict the density of ordnance on sites with spatially random dispersal of ordnance. Source: (5).

Surface Removal: Removal of MEC from the ground surface by UXO teams using visual identification sometimes aided by magnetometers. Source: (1).

Track 0 Areas: Areas of the former Fort Ord that contain no evidence of MEC and have never been suspected of having been used for military munitions-related activities of any kind. This definition has been clarified in the Explanation of Significant Differences, Final Record of Decision, No Action Regarding Ordnance-related Investigations (Track 0 ROD), former Fort Ord, California (March 2005) to include areas not suspected as having been used for military munitions-related activities of any kind, but where incidental military munitions have been discovered. Source: (1).

Track 1 Sites: Sites at the former Fort Ord where military munitions were suspected to have been used, but based on the results of the Munitions Response Remedial Investigation/Feasibility Study (MR RI/FS) each site falls into one of the following three categories: Category 1: There is no evidence to indicate military munitions were used at the site (i.e., suspected training did not occur); or Category 2: The site was used for training, but the military munitions items used do not pose an explosive hazard (i.e., training did not involve explosive items); or Category 3: The site was used for training with military munitions, but military munitions items that potentially remain as a result of that training do not pose an unacceptable risk based on site-specific evaluations conducted in the Track 1 OE RI/FS. Field investigations identified evidence of past training involving military munitions, but training at these sites involved only the use of practice and/or pyrotechnic items that are not designed to cause injury. In the unlikely event that a live item of the type previously observed at the site is found, it is not expected that the item would function by casual contact (i.e., inadvertent and unintentional contact). Source: (1).

Track 2 Sites: Sites at the former Fort Ord where MEC items were present, and MEC removal has been conducted. These areas are evaluated in area-specific RI/FSs to assess whether they are in a protective state based on their reasonably anticipated future land uses. Possible outcomes of a Track 2 RI/FS and ROD could include no further action, land use controls, and/or additional MEC removal. Source: (1).

Track 3 Sites: Track 3 Sites are those areas where MEC is suspected or known to exist, but investigations are not yet complete or need to be initiated, or any area identified in the future. Source: (1).

Unexploded Ordnance (UXO): Military munitions that: (A) Have been primed, fuzed, armed, or otherwise prepared for action; (B) Have been fired, dropped, launched, projected, or placed in such a manner as to constitute a hazard to operations, installations, personnel, or materials; and

- (C) Remain unexploded, whether by malfunction, design, or any other cause. (10 U.S.C. 101 (e)(5)). For the purpose of the Basewide Munitions Response Program being conducted for the former Fort Ord, UXO does not include small arms ammunition .50 caliber and below.
- **UXO-Qualified Personnel:** Personnel who have performed successfully in military EOD positions, or are qualified to perform in the following Department of Labor, Service Contract Act, Directory of Occupations, contractor positions: UXO Technician II, UXO Technician III, UXO Safety Officer, UXO Quality Control Specialist, or Senior UXO Supervisor. Source: (7).

UXO Technician: Personnel who are qualified for and filling Department of Labor, Service Contract Act, Directory of Occupations, contractor positions of UXO Technician I, UXO Technician II, and UXO Technician III. Source: (7).

Appendix G

Response To Comments on the Draft Track 2 Remedial Investigation/Feasibility Study, BLM Area B and MRS-16, Former Fort Ord, California

Document: Draft, Track 2 Remedial Investigation/Feasibility Study BLM

Area B and MRS-16, Former Fort Ord, California

Commenting Organization: US Environmental Protection Agency

Name: Lewis Mitani

Date of Comments: January 15, 2014

General Comment 1

The Draft Track 2 Remedial Investigation/Feasibility Study (RI/FS), BLM (Bureau of Land Management) Area B and MRS (Munitions Response Site) -16 (hereinafter referred to as the "Draft RI/FS"), occasionally uses general munitions terminology that requires interpretation as to what exactly is intended. For example, the statement is made in a number of sections that "2.36-inch rockets" were found in an area. No statement is made as to whether these items were fired or discarded. Also missing is a statement as to the types of 2.36-inch rockets discovered (i.e., high explosive anti-tank (HEAT), practice, white phosphorous (WP) smoke, HC smoke, or incendiary rockets). This requires that the worst-case assumption be made that all types were present and that all did not function as designed. If the original listing of the munition includes slang or is obviously incorrect, an attempt should be made to identify the item and list it in a manner that allows the hazards and other pertinent information to be discerned.

Please review the statements describing the munitions found in each area and revise them to include the types (e.g., practice, HEAT, etc.) and whether the munitions were fired, discarded, or a combination thereof. If this information is not available, please include a statement to that effect.

Response to General Comment 1: The descriptions and discussions of MRSs and associated munitions items are based on archival data, previously completed investigations, and removal actions, presented in documents in the Administrative Record and maintained in the Fort Ord Military Munitions Response Program (MMRP) database. As discussed in Section 3.7.2.3 of the RI, the Army has conducted a quality control/quality assurance (QC/QA) review of munitions and explosives of concern (MEC) data in the MMRP database. A 100-percent check of all available grid records was conducted to identify discrepancies which were researched; corrections were made, if appropriate, before the data were loaded into the project database. In addition, the United States Army Corps of Engineers (USACE) implemented QA review of 10 percent of the data. Specific munitions descriptions are provided in the Appendix A MEC and

munitions debris (MD) tables, and aerial distributions of MEC/MD are provided on Figures 3-2, 3-4 and Figures presented in Appendix B.

With respect to responses to specific comments presented following general comments, non-standard terminology has been corrected where possible as described below. In the MMRP database, munitions items for which available information is insufficient to identify their full nomenclature are entered with their original description which could contain nonstandard terms. These items are noted with an asterisk (*) in Appendix A.

Most references to "2.36-inch rockets" are found in Section 3.4.2, which summarizes the history of investigations at MRS-16. MRS-16 information is provided in summaries of the *Final Interim Action OE RI/FS for Ranges 43-48, Range 30A, Site OE-16* (Harding ESE, 2002) (Interim Action RI/FS) and *Final MRS-16 Munitions and Explosives of Concern Remedial Action Report, Former Fort Ord, California* (Shaw, 2009) (Interim Action RA Report). In Section 3.4.2.1, descriptions of munitions items found during earlier investigations are as described in the source document, the Interim Action RI/FS. The summary of the Interim Action RA Report in Section 3.4.2.2 describes MEC rocket items found during the Interim Action were rockets, 2.36-inch, HEAT, M6.

In reviewing the discussions of "2.36-inch rockets" in the sub-sections describing history of munitions response (MR) investigations (Sections 3.2 and 3.3), most are specific enough to describe 2.36-inch rockets as high explosive (HE) or practice and as MD or MEC. Where this is not the case, the text will be clarified. In addition, for MEC items, the descriptions will be further clarified as to whether the items were unexploded ordnance (UXO) or discarded military munitions (DMM).

The conceptual site model (CSM) (Section 3.6) section is general in nature and do not always specify HE or practice items. The Site Evaluation (Section 3.7) section also uses somewhat general terminology, but specifies whether rockets are HE or practice. Where this is not the case, the text will be corrected. The reader is referred to Appendix A for the listing of items found in each MRS.

General Comment 2

There are a number of instances where the size of specific MRSs and sub-areas vary in different portions of the document. These include:

- BLM Area B is listed as 1,566 acres in Section 2.1.1, and as 1,529 acres in Table 3-1.
- MRS-16 is listed as 80 acres in Section 2.1.1 and Section 3.4.1, and as 81 acres in Table 3- 1.
- BLM East is listed as 138 acres in Section 3.2 (44 plus 94), and as 142 acres in Table 3-1.
- MRS-9 is listed as 7 acres in Section 3.3.1.1, and as 8 acres in Table 3-1.
- MRS-27G is listed as 4.3 acres in Section 3.3.12.1, and as 4 acres in Table 3-1.
- MRS-27J is listed as 20 acres in Section 3.3.14.1, and as 7.3 acres in Table 3-1.
- MRS-48 is listed as 28 acres in Section 3.3.7.1, and as 29 acres in Table 3-1.
- BLM Sub-area B-3 is listed as 687 acres in Section 3.6.2, and as 325.8 acres in Section 4.6.6. (NOTE: This may be a typographical error, as the sub-area under discussion in Section 4.6.6 is Sub-area B-4 and not B-3.)

It is understood that some of these inconsistencies may be due to some differences between the areas as originally described and the areas as evaluated later in the process. However, these differences should be explained in the narrative or in the table and the total acreages should be accounted for at each listing. Please correct these portions of the Draft RI/FS to make the numbers consistent or to provide an explanation of the inconsistencies.

Response to General Comment 2: Acreages in Table 3-1 are correct and the text will be corrected.

Following the release of the Draft RI/FS, BLM area B was expanded to include an area immediately north of BLM Area B and west of Barloy Canyon Road. This area is 31 acres and has been added to sub-area B-3.

Specific Comment 1

Section 2.1.2, General History, Page 2-1: The first paragraph of this section states that, "Fort Ord was a basic training center from 1947 to 1975 and served as a base for the 7th Infantry Division after 1975." While this statement that the division was present after 1975 is correct, the official U.S. Army History notes that the 7th Infantry Division was "Activated 21 October 1974 at Fort Ord, California." Please correct the cited statement to reflect the presence of portions of the division at Fort Ord in 1974 and in 1975.

Response to Specific Comment 1: The sentence has been revised as follows: "Fort Ord was a basic training center from 1947 to 1974 and the 7th Infantry Division was activated at Fort Ord on 21 October 1974."

Specific Comment 2

Section 2.1.3.1, Developed Land, Page 2-2: This section notes that, "BLM Area B and MRS-16 do not included developed land other than access roads and trails." However, Section 2.1.3.2, Undeveloped Land, which immediately follows, indicates that, "BLM Area B and MRS-16 are primarily undeveloped land in the inland portions of the former Fort Ord. These areas are left in their natural state, with only minor development of support facilities associated with training that occurred (e.g., access roads, observation towers, targets, trenches, bunkers, fighting positions, bivouac areas, etc.)." This seems to contradict the preceding section by adding developed facilities to include "observation towers, targets, trenches, bunkers, fighting positions, bivouac areas, etc." Please review the two noted sections and correct them as needed to make them consistent. Also, in the quoted sentence from Section 2.1.3.1, please change the word "included" to read "include."

Response to Specific Comment 2: Section 2.1.3.1 has been revised as follows: "BLM Area B and MRS-16 are primarily undeveloped land in the inland portions of the former Fort Ord, with only minor development of support facilities associated with training that occurred (e.g., access roads, observation towers, targets, trenches, bunkers, fighting positions, bivouac areas, etc.)."

Section 2.1.3.2 has been revised as follows: "BLM Area B and MRS-16 are primarily undeveloped, with the exception of support facilities noted above."

Specific Comment 3

Section 3.1.6, USA Environmental (USA/CMS), Page 3-6: The third paragraph on page 3-6 reads that, "USA noted in the after-action report for the removal action at MRS-14D that the practice of using explosive shape-charges to confirm the suspected MEC items were inert or expended, or actually MEC items, we not instituted until after operations at MRS-14D was completed." As currently constructed, the cited sentence is difficult to understand. It appears that the word "we" should read "were." If this is correct, please make the correction. If this is not, please revise the sentence to better express the intent thereof.

Response to Specific Comment3: The text has been revised as follows: "USA noted in the after-action report for the removal action at MRS-14D that the practice of using explosive shape-charges to confirm the suspected MEC items were inert or expended, or actually MEC items, we was not instituted until after operations at MRS-14D were completed."

Specific Comment 4

Section 3.2, BLM Area B East Area - MRS Descriptions, Page 3-10: The first paragraph states that, "The Track 2 MRSs the southern portion include MRS-14D (including small portions of MRS-14B and MRS-14E), MRS-25, and MRS-26, covering approximately 94 acres (MRS acreages are provided in Table 3-1)." As currently constructed, the cited sentence is difficult to understand. It appears that the word "in" should be present between the acronym "MRSs" and the word "the." If this is correct, please make the correction. If this is not, please revise the sentence to better express the intent thereof.

Response to Specific Comment 4: The text has been revised as follows: "The Track 2 MRSs <u>in</u> the southern portion include MRS-14D (including small portions of MRS-14B and MRS-14E), MRS-25, and MRS-26, covering approximately 97 acres (MRS acreages are provided in Table 3-1)."

Specific Comment 5

Section 3.2.3.2, MRS-14D History of MR Investigations, Page 3-16: The last paragraph of this section refers to a "105mm projectile casing." It is unclear as to the identity of this item, as it may be an empty projectile body, or a cartridge case that was assembled to a 105mm projectile of unidentified type. As 105mm cartridges of different construction are fired by both 105mm guns and 105mm howitzers, this item may have been used by a tank or anti-aircraft gun, or by a field artillery howitzer. Please revise the noted description to clarify the identity of the item found.

Response to Specific Comment 5: The terminology has been revised to: "105mm projectile cartridge case, expended (model unknown)". For reference, four types of 105mm projectiles have been found at Fort Ord (as MEC and/or MD), all of which are used with field artillery howitzers:

- Projectile, 105mm, high explosive, M1
- Projectile, 105mm, illumination, M314 series
- Projectile, 105mm, smoke, M84 series

• Projectile, 105mm, target practice tracer, M67 series

Specific Comment 6

Section 3.3.2.2, MRS-10A History of MR Investigations, Page 3-18: The third paragraph of this section refers to a "75mm cartridge." The listing does not provide the complete nomenclature and it does not appear to be recorded in Table A-3b, BLM Area B, MRS 10A, MEC and MD Items Found, unless it is the item listed at the top of page 1. That item reads, "CTG, 75MM, HE (Model Unknown)*" and there are two of them recorded in the table. Please review the cited listings and revise them as needed to resolve this discrepancy.

Response to Specific Comment 6: The text has been revised as follows: "A total of 5,018 small arms ammunition items, four five MEC items (two 81mm mortar projectiles, a 40mm illumination projectile, and a two 75mm cartridges, 75mm, high explosive [model unknown]), and 11 MD items were discovered during this removal (USAEDH, 1997a)."

Specific Comment 7

Section 3.3.4.2, MRS-19 History of MR Investigations, Page 3-21: The fifth paragraph of this section notes that, "A site investigation conducted as part of the BRA in August 2001 identified three foxholes, three potential firing points, a soil pit (depression), four empty 55-gallon drums, and multiple MD items as shown in Table A-3 (signal flares, 40mm flares, grenade fuzes, grenade spoons, smoke] hand grenade, 40mm cartridge cases, cap M10, smoke pot, and a 3.5mm rocket fan)." There are issues with the item descriptions as follows:

- "Grenade spoons" is a slang term. The correct term is "hand grenade safety lever."
- "Cap M10" is insufficient information to allow identification of the item.
- "3.5mm rocket fan" appears to be a fin from a 3.5-inch rocket, as there is no 3.5mm rocket in the official listings of type classified military munitions.

Please review the cited items and correct them as necessary.

Response to Specific Comment 7: The terminology "grenade spoons" has been changed to "hand grenade safety lever" as listed in the data base for the BRA 2001 investigation. Terminologies "Cap M10" and "3.5mm rocket fan" are listed as such in the data base and have not been revised in the text, as it is not possible to interpret further. The paragraph in Section 3.3.4.2 will be clarified to describe that the terminologies in the data base for these items are

from the original field notes nomenclature. The Appendix A MEC/MD tables have the following note that applies to these items: "The * in MM item description field means there is no equivalent Master Pick List nomenclature for the item, the nomenclature from the original grid sheet was used."

Specific Comment 8

Section 3.3.6.2, MRS-41 History of MR Investigations, Page 3-22: This section notes the presence of a "fuze, projectile, TPP." Please define the acronym "TPP" in this section and in Section 3.3.11.2, MRS-58 History of MR Investigations, Page 3-27.

Response to Specific Comment 8: The munitions term "fuze, projectile, TPP" was incorrect; the munitions description as cited in the 1994 HFA report was "fuze, projectile, PTT". The acronym "PTT" has been revised to a more correct terminology "PTTF" and has been added to the acronym list and defined as "powder, train, time, fuze".

Specific Comment 9

Section 3.3.10.2, MRS-58 History of MR Investigations, Page 3-26: The last paragraph of this section notes the presence of a "safety level (model unknown)." This is likely a hand grenade safety lever of some type. Please review the cited item and revise its description as needed.

Response to Specific Comment 9: The text has been revised to "safety lever (model unknown)".

Specific Comment 10

Section 3.6.1.7, Subcaliber Artillery and Mortar Training, Page 3-41: The last sentence in this section states that, "It is possible that duds could be presented downrange (Army, 1994b)." The word "presented" should be changed to read "present." In addition, the word "duds" should be replaced with the term "unexploded projectiles." Please make this correction in this section.

Response to Specific Comment 10: The terminology "duds" has been revised to "unexploded projectiles" and "presented" has been revised to "present."

Specific Comment 11

Section 3.7.2.1.1, Literature Review - Historical Use, Page 3-56: The first sentence in the Sub-Area B-5 (MRS-12 and MRS-21) subsection reads that, "According to interviews, the hills within

MRS-12 (Picnic Canyon) were used as firing points and target areas for mortars, rifle grenades, and shoulder-launched projectiles in the 1940s and 1950s (USAEDH, 1997a)." It is very unlikely that the same hills were used as both firing points and target areas. Normal Army practice is to prohibit the location of firing points in areas where unexploded ordnance (UXO) may be present. To fire from a location that others have fired upon is unnecessarily exposing personnel to danger. Please review the cited extract and revise the verbiage as necessary. (NOTE: This same statement is found in 'Section 3.7.2.1.3 on page 3-57.)

Response to Specific Comment 11: Section 6.12 Site OE-12 on page 6-7 of the 1997 Revised ASR includes a statement as follows: "According to interviews the hills in this canyon were firing points and target areas for mortar, rifle grenades, and shoulder launched projectiles in the 1940s and 1950s." The text in Sections 3.7.2.1.1 and 3.7.2.1.3 has been changed to add quotation marks to the text directly from the ASR.

Specific Comment 12

Section 3.7.2.2.1, MR Removal Action Review - Investigation Design, Page 3-58: The last sentence in the first paragraph of this section reads that, "Schonstedt responses indicative of potential MEC items ("hits") were marked in the field with pin flags, and each "hit" location was excavated until a metal object was encountered or the instrument no longer showed a response." As written, this sentence indicates that the excavation stopped if a "...metal object was encountered..." The phrase "...was excavated until a metal object was encountered or the instrument no longer showed a response..." has the word "or" instead of the word "and." That wording would have indicated that the excavation continued after the metal object was found until the instrument response ceased. Please correct this sentence as noted.

Response to Specific Comment 12: It has been determined that this introductory paragraph to Section 3.7.2.2.1 is not relevant to the investigation design for each sub-area and has been deleted. Each contractor's munitions response actions are described in Section 3.1. The depth to which items were removed depends on the type of removal being conducted. As described in Section 3.7.2.2.1, the removal in sub-area B-6 was to four feet below ground surface. In sub-areas B-4 and B-5, the removals included surface, subsurface to one foot below ground surface, and subsurface to four feet below ground surface.

Specific Comment 13

Section 4.0, Risk Assessment, Page 4-1: The second paragraph states that, "Roads and trails have been checked, used, and maintained, and it can be said with confidence that the current use on the roads and trails in BLM Area B is safe." This statement is a definitive pronouncement that does not appear to consider the fact that all of the MEC has not been removed from the roads and trails. To state that these locations are "safe" does not consider that "safe" is relative and does not consider all of the potential sources for a possible mishap. Please review the cited statement and revise it as necessary to remove the definitive statement that the current use is "safe."

Response to Specific Comment 13: To clarify, the text will be revised to: "Roads and trails have been subjected to MEC investigations, including surface MEC removal and subsurface activities with construction support in some locations. Incident reporting procedure for suspected munitions items have been implemented for over ten years. Based on the current understanding of the site, it is not likely that people traversing on the roads and trails (those that are authorized for public use) would encounter a MEC item. If any MEC (or item that resembles MEC) is discovered in the future, MEC incident reporting system is in place to address the item."

Specific Comment 14

Section 4.6.2, Sub-Area B-2, Page 4-7: The Depth Below Ground Surface subsection states that, "No MEC hazard type 3 items were found during the sampling in sub-area B-2; therefore, no score can be developed." This statement appears to eliminate a possible score for the site and not just the hazard type 3 items. It would eliminate this potential misinterpretation if the words "...for MEC hazard type 3" or similar wording were added at the end of the cited sentence. Please make this change.

Response to Specific Comment 14: The text in Section 4.6.2 has been revised as follows: "No MEC hazard type 3 items were found during the sampling in sub-area B-2; therefore, no score can be developed for MEC hazard type 3 items."

Specific Comment 15

Section 5.2.2.3, Construction Monitoring/UXO-Qualified Personnel Support, Page 5-13: The last sentence in the first paragraph of this section states that, "The local law enforcement agency would promptly dispatch or arrange a response by to address the item (e.g., an EOD unit)." As written, this sentence appears to be missing some words. The statement "... response by to

address the item ..." seems to be missing an explanatory statement after the word "by" as to the responding organization. If the explanatory statement were inserted between the words "by" and "to," or the word "by" were eliminated from the sentence, the noted issue would be corrected.

Also, the use of the word "promptly" appears to be predictive of the manner in which the local law enforcement will respond to the request for a response. The intent of the sentence would likely be better presented if the words "would be requested to" were inserted between the words "would" and "promptly."

Please revise the cited sentence as indicated to better reflect the intended meaning thereof.

Response to Specific Comment 15: The text has been revised as follows: "If evidence of MEC is found during intrusive construction activities, the work would cease; a process has been developed for reporting such finds to an appropriate local law enforcement agency. The local law enforcement agency would arrange a response by UXO-qualified personnel who will promptly be dispatched or arrange a response by to address the item (e.g., an EOD unit)."

Specific Comment 16

Section 5.2.3.2, MEC Remedial Action, Page 5-26: This section states that, "After vegetation clearance is performed, MEC remedial action would be implemented, and would include the following four components, as described below: (1) MEC removal (surface and subsurface); (2) MEC detonation; (3) digital mapping of anomalies; and (4) post-remediation habitat monitoring." However, there appears to be some divergence from the noted sequence in the subsections that follow. Subsection 5.2.3.2.1, MEC Removal, is followed by Subsections 5.2.3.2.2 (MEC Detonation) and 5.2.3.2.3 (Digital Mapping of Anomalies). However, the process noted in Subsection 5.2.3.2.3 indicates that, "After MEC were removed from the surface, digital mapping would be performed, using the best appropriate technology, to locate and record anomalies identified during the survey. A map of the anomalies would be included in the after-action report to assist future property users to consider this information in land management decision-making." This would seem to indicate that the subsurface removal described in the preceding subsection (i.e., 5.2.3.2.1) has not been done at this point.

Please review the cited subsections and revise them as necessary to eliminate the noted Issue.

Response to Specific Comment 16: This section is intended to describe the applicable response actions that could be included in remedial alternatives (remedial alternatives are

described in Section 5.3). In section 5.2.3.2.1, MEC Removal, it discusses that MEC removals at BLM Area B or MRS-16 would be "Technology-Aided Surface MEC Removal" or "Subsurface MEC Removal." The latter method includes investigation and removal of surface and subsurface anomalies that are detected. Digital mapping of anomalies, described in Section 5.2.4.2.3, is an activity that would supplement the surface removal scenario.

The text in Section 5.2.3.2 will be revised to read, "After vegetation clearance is performed, MEC remedial action would be implemented, and would could include the following four components, as described below: (1) MEC removal (surface and <u>/or</u> subsurface); (2) MEC detonation; (3) digital mapping of anomalies <u>in surface removal areas</u>; and (4) post-remediation habitat monitoring."

Document: Draft, Track 2 Remedial Investigation/Feasibility Study BLM

Area B and MRS-16, Former Fort Ord, California

Commenting Organization: California Department of Toxic Substances Control

Name: Ed Walker

Date of Comments: February 28, 2014

General Comment 1

Please note that the California Department of Toxic Substances Control (DTSC) recommend complying with the Army Remedial Investigation/Feasibility Study (RI/FS) Guidance document by developing data quality objectives (DQOs) for the RI and then comparing the data collected to the DQOs to determine whether or not the DQOs were fulfilled or if data gaps exist. This process would have brought this project into compliance with the Army and Environmental Protection Agency (EPA) guidance and would have benefited this effort by providing definitive and agreed-upon standards by which the adequacy of the existing data would be assessed in Section 3.8.1.2 and 3.8.1.3. Without DQOs we are all required to independently interpret and analyze the existing data and determine its adequacy. The Department strongly recommends complying with Army and EPA guidance on future Rls and the method described above (developing DQOs even after the data is collected) can be valuable for positively establishing the adequacy of the data and identifying data gaps and will help achieve agreement among the various organizations involved. However, as this recommended approach was not implemented on this project, DTSC has moved forward with independent evaluation of the existing data and these comments reflect the results of that independent evaluation. Also please note that "usable data" is defined as, "data of sufficient quality for use in the decision-making process", in Section 4.2 without any attempt to quantify what usable data actually is. Including DQOs would allow a much better and less subjective definition of "usable data" such as, "usable data is data that complies with the established DQOs".

Response to General Comment 1:

The BLM Area B and MRS-16 RI/FS was developed based on the evaluation of previous work according to the guidance provided in the *Final Plan for the Evaluation of Previous Work* (OE-0283G) (EPW) and the Track 2 Data Quality Objectives Technical Memorandum (OE-0473) (Track 2 DQOs TM). The EPW provides the method for reviewing the work completed and determining whether the data meets the established data collection and quality goals through the use of the EPW checklists. The Track 2 DQOs TM provides the DQOs for evaluation of the

data to be used in a risk assessment and feasibility. The review of the data for BLM Area B is provided in Section 3 and in the EPW checklists provided in Appendix C. This information will be summarized in Section 2.

General Comment 2

Adding line numbers to draft documents will improve the efficiency of identifying specific locations in the document and is recommended. See the next comment for an example of the inefficiency associated with not using line numbers.

Response to General Comment 2: Comment noted. Where applicable for larger documents, Gilbane draft documents will use line numbers.

Specific Comment 1

Minor typo: On Page 3-6, third paragraph, last sentence, the statement is made that a process "we not instituted". This should be "were not instituted".

Response to Specific Comment 1: The text will be modified as suggested.

Specific Comment 2

Section 3.2.3.2 on Page 3-16 references "four soil pits". Please explain what these are.

Response to Specific Comment 2: The "soil pits" are not further explained in the Basewide Range Assessment Comprehensive Report (MACTEC/Shaw, 2012). The objective of the site reconnaissance was to "collect data to determine if an area has the potential for significant chemical contamination." According to the Basewide Range Assessment Work Plan (IT Corporation, 2001) during the site reconnaissance features to be recorded included locations of stained soil or disturbed ground and other features that may aide in the development of a soil sampling plan. The Basewide Range Assessment sampled the MRS for explosives and perchlorate and concluded that MRS-14D required no further action.

Specific Comment 3

Section 3.3.1.2 on Page 3-17 says that four 100ft.x 100ft. grids are approximately 46% of this 7-acre site. This is not correct as the four grids equal slightly less than one acre in an area.

Response to Specific Comment3:

The four grids are approximately 13 percent of the munitions response site (MRS) and the text has been revised to correct this and Appendix C has been revised.

Specific Comment 4

The statement is made in Section 3.4.3 on Page 3-34 that, "Based on the work conducted, it is considered unlikely that subsurface munitions and explosives of concern (MEC) remains in areas where subsurface clearance was completed", followed by the sentence, "It is possible that subsurface MEC does remain, considering that the detection instruments are not 100 percent effective". The second sentence is accurate and the first sentence should be deleted as these two statements are contradictory.

Response to Specific Comment 4:

Section 3.4.3 conveys the conclusions made at the completion of Interim Action at MRS-16, as stated in the *Final MRS-16 Munitions and Explosives of Concern Remedial Action Report, Former Fort Ord, California* (Shaw, 2009) (Interim Action RA Report). For the portion of MRS-16 where subsurface MEC removal was completed, the Interim Action RA Report concluded that while subsurface MEC was unlikely, the possibility for subsurface MEC to be present had not been completely eliminated.

Specific Comment 5

The statement in Section 3.4.3 on Page 3-35 that, "MEC may remain below the surface within the "saturated area", is not correct. MEC is documented to exist buried in the saturated area and this statement should be corrected to reflect this.

Response to Specific Comment 5: As reported in the Interim Action RA Report, subsurface MEC removal operation was conducted by Shaw in 13 grids (two partial and 11 full grids) within the "saturated area." Investigation of three burial pits yielded substantial amounts of expended 2.36-inch rockets (MD) and no MEC. The "saturated area" was further investigated by trenching and high density of MD and general metallic debris was found. The surveys indicated that the debris appeared to significantly taper off below one-foot. Two subsurface MEC items were recovered from the Interim Action work within the "saturated area." Subsurface MEC within the "saturated area" and grids bordering the area (from the Interim Action and previous work) are shown in Figure 10-1 and Table 10-1 of the Interim Action RA Report. The Interim Action RA Report provided an evaluation of the potential for subsurface MEC in the "saturated area" and concluded that MEC may remain below the surface.

Specific Comment 6

Directly following the statement noted above, another statement is made that the saturated area of munitions response sites (MRS-16) is considered safe for its intended reuse. This statement should be removed from the RI portion of this document because evaluation of the appropriateness of the past removal actions at this site should be performed in the FS. If this statement must remain it would be factually correct to modify it to say that this determination was made in a prior document but that it is being reevaluated in the FS portion of this document.

Response to Specific Comment 6: The Interim Action at MRS-16 has been completed, evaluated, and documented in the Interim Action RA Report. A risk assessment was conducted following the Interim Action at MRS-16 and included in the Interim Action RA Report. Based on the evaluation the "saturated area" is considered safe for its intended reuse because a surface removal has been conducted, and recommended institutional controls at the site include unexploded ordnance (UXO) support for intrusive activities. This information is noted in Section 3.4.3 of the RI/FS. To address the residual risks, Section 5 of the RI/FS provides an evaluation of remedial alternatives for MRS-16.

Specific Comment 7

The last sentence of this same paragraph says that the Interim Action was competed at MRS-16 and further evaluation of this MRS will not be performed. This is not a correct statement as the interim action was not fully completed in the saturated area and further evaluation of this area is needed. This applies most importantly to a needed risk assessment for the saturated area in Chapter 4. Please modify this statement and include evaluation of the saturated area in the sections noted in this statement and especially a risk assessment in Chapter 4. It would be helpful to also include a summary of the previously completed risk assessment for the remainder of MRS-16 in Chapter 4.

Response to Specific Comment 7: As noted earlier, the Interim Action at MRS-16 has been completed, evaluated, and documented in the Interim Action RA Report. Although the "saturated area" did not receive complete subsurface removal, the surface removal was completed and investigation of the subsurface indicated a high density of metallic debris in the top one-foot of soil. A risk assessment was conducted following the Interim Action at MRS-16. As reported in the Interim Action RA Report, the portions of MRS-16 where subsurface MEC removals were complete received a score of "A" and the portions where subsurface MEC removals were not completed received a score of "E." This information is provided in Section 3.4.

Specific Comment 8

Mudhen Lake in Subarea B-5 is inconsistently addressed. It is correctly stated in the report that MEC was not removed from the lake. But it is referred to as "surface MEC" in Section 5.4.1.7.2 on Page 5-66. Then the discussion of Alternative 4 discusses dewatering the lake and performing "subsurface removals". The lake presents an anomaly because the "surface of the bottom" is actually under the water and is not accessible to site users and "subsurface MEC removal" requires dewatering to gain access to what is really an inaccessible area. This makes it difficult to fit the lake into the same conceptual format that is used for the remainder of the BLM area. There is no perfect answer to this problem but consideration should be given to separating the lake from Subarea B-5 and making it its own hazard area because it has unique access properties. For example, it may be highly unlikely or impossible for there to be trespasser or maintenance worker access to MEC in the lake. It may be beneficial to evaluate the risk and remedial alternatives for the lake as a separate subarea and consideration should be given to this.

Response to Specific Comment 8: While MRS-21 is named "Mudhen Lake," the submerged area (referred to as the lake) makes up a portion of the site's acreage. The surface removal in MRS-21 was conducted to the edge of the water remaining in the lake in the fall season, when the lake level was at its lowest. MEC removal was not conducted within the submerged area. The preferred alternative for sub-area B-5 is land use controls. The land use controls would be developed to apply both to the lake portion and the terrestrial portion of the sub-area.

Specific Comment 9

Sections 5.4.1.8.1 and 5.4.1.8.2 have sentences that discuss the effectiveness of detection technologies in these sections on the No Further Action (NFA) alternative. It appears that these sentences do not add any value to the NFA discussion and should be removed.

Response to Specific Comment 9:

Munitions response actions were conducted in sub-area B-6. The purpose of discussing the effectiveness of detection technologies in the cited sections is to show that the potential for MEC items to remain in the site has not been completely eliminated by conducting a subsurface removal action. This is relevant information when evaluating the remedial alternatives with respect to the Overall Protectiveness criteria.

Specific Comment 10

DTSC does not concur with the analysis for the saturated area in MRS-16. Unsupported statements are made to support not removing MEC from the saturated area such as in Section 5.4.1.9.4 that, "... complete subsurface MEC removal in the "saturated area" would be protective of human health, but would have limited change on the potential MEC risk remaining". "Limited change" is not defined or quantified and the benefit of removing a large quantity of MEC from the saturated area should not be dismissed so casually. And, it is noted that the potential MC release from a large buried mass of MEC is not addressed at all in this analysis. DTSC recommends a group discussion on the saturated area as the Department believes that there may be significant safety and environmental benefits to removal of this large MEC burial. This is especially potentially appropriate when considering the estimated cost of \$817,000 for removal of such a large quantity of MEC to achieve the elimination of safety and environmental concerns for this area.

Response to Specific Comment 10: As described in the Interim Action RA Report, the "saturated area" "surrounds the former targets for the bazooka range. It is suggested that the high density of metallic debris in this area results from heavy equipment moving the soil during or after use of the range." While subsurface MEC are possible in the "saturated area," there is no evidence to indicate the "saturated area" is "a large buried mass of MEC" as indicated in the comment. Therefore, the scenario that few or no MEC is recovered under Alternative 4 is considered in the evaluation in Section 5.4.1.9. The statement that the alternative "...would have limited change on the potential MEC risk remaining" will be removed.

Evaluation of potential soil contamination is addressed under the Basewide Range Assessment (BRA) program. Under the BRA, soil characterization was performed after the interim remedial action was conducted at MRS-16. As reported in the *Basewide Range Assessment Comprehensive Report* (MACTEC/Shaw, 2012), samples were collected for lead and explosives. One composite sample location showed lead with a maximum concentration of 1,270 mg/kg. This material was excavated and transported to the OU2 Landfills. Based on the evaluation, no further action was recommended in the *Basewide Range Assessment Comprehensive Report* (MACTEC/Shaw, 2012).

Specific Comment 11

Table 3-2 showing the risk analysis for MRS-16 does not appear to include analysis of the saturated area. For example, statements that, "... removal to depth was completed and all detected MEC items were removed..." (this statement is made numerous times) is not correct

for the saturated area. There are also other errors on this table. For example, the statement is made that, "The outdoor maintenance worker is not expected to intrude below the surface", but that is what outdoor maintenance workers do, as is documented on Table 4-1. Another error is the inclusion of statements about trespasser exposure in the section of the table on "outdoor maintenance". Reviewing and correcting this table is recommended.

Response to Specific Comment 11: Table 3-2 provides the risk assessment for the areas where removal to depth was completed. Table 3-3 provides the risk assessment for the areas where removal to depth was not completed (the "saturated area"). The tables will be reviewed and corrected as recommended.

Specific Comment 12

MRS-16 should be added to Tables 4-8 and 4-9 with a separate calculation for the MRS-16 saturated area. Also, why is it not an "Evaluation of Previous Work" checklist included in Appendix C for MRS-16?

Response to Specific Comment 12

A risk assessment was conducted following the Interim Action at MRS-16, and the results are included in the Interim Action RA Report. This is described in Section 3.4.3 of the RI/FS. Risk assessment results for MRS-16 are provided in Tables 3-2 and 3-3 of this document. Because the site has already been characterized and evaluated, a remedial investigation and risk assessment were not conducted again for MRS-16.

Specific Comment 13

Some of the figures are not very usable and modifying them should be considered. For example:

- The density of the icons on Figures 3-2, 3-4, 4-3 and 4-4 make it impossible to view the data. Even enlarging the figure to 400% does not eliminate layers of overlapping icons. If the icons cannot be viewed, it is an indication that the figure is not usable.
- Are all of the listed types of MEC on Figures 3-2 and 3-4 really MEC? It appears that a
 lot of these are munitions debris (MD) especially all of the subcaliber items which make
 up the majority of the icons on the map. It may be helpful to show only actual MEC and
 eliminate the MD from this figure to simplify the figure and provide more useful
 information on the hazards that were found.
- Figure 3-5 includes cross-hatching on the map that isn't shown in the legend. This creates confusion when trying to determine the area of Sector B-3 for example. It is broken up by some areas that are the same color, but include the cross-hatching and some areas that do not include the cross-hatching which makes the reviewer wonder if this entire blue area is Sector B-3. The cross hatching is probably being used to show

the boundaries of the MRS within the sector but it tends to confuse. This can possibly be resolved by including two maps on this figure with one showing only the sectors and the other showing only the broad MRS outlines. The reader should be able to quickly "eyeball" the two maps to see how the sector boundaries compare to the MRS boundaries.

 Are Figures 4-3 and 4-4 correct? One shows surface MEC and one shows subsurface MEC but the figures appear to show identical data for Subarea B-6.

Response to Specific Comment 13:

The Army agrees that the figures do contain considerable amounts of information because many items were found during the previous munitions response actions.

- In an attempt to simplify the review of the information in the figures, the figures in Appendix B were prepared to show the MEC information grouped by types of items on separate figures. Additional reference to Appendix B will be provided in the draft final to direct the reader to these figures.
- The items shown on Figures 3-2 and 3-4 are MEC if they are listed by type. MD items are displayed in gray and were included to give the reader an understanding of the amount of items that were found and any potential patterns that may exist. Again, the reader is directed to Appendix B where only MEC items are shown on the figures.
- The cross-hatching shows the MRSs and is shown on the legend as such. Figures 3-1,
 3-2, 3-3, and 3-4 also show the MRS boundaries with the MRSs shaded in gray.
- Because the depth of items was not recorded during the MRS-14D MEC removal action, the items are shown on both Figure 4-3 and 4-4 as potentially being on the surface or in the subsurface. The following note in the legend was provided to explain this information: "Note: MEC items in sub-area B-6 were removed from the surface and to a depth of four-feet; however, the depth below ground surface was not required to be documented during the removal. Because exact depths are not known, MEC items in B-6 are shown as being on both the surface and in the subsurface."

Document: Draft, Track 2 Remedial Investigation/Feasibility Study BLM

Area B and MRS-16, Former Fort Ord, California

Commenting Organization: Bureau of Land Management

Name: Eric Morgan

Date of Comments: March 6, 2014

General Comment 1

This letter is in response to the Draft Track 2 Remedial Investigation / Feasibility Study BLM Area B and MRS-16 that was released for comment in November of 2013. The Bureau of Land Management (BLM) appreciates the efforts of the Army in cleaning up munitions and explosives of concern (MEC) at the former Fort Ord, and the partnership that our agencies have forged over the last 17 years in this regard.

The remediation options analyzed within the document cover lands that are administered by the BLM through a Letter of Transfer from the Army in October of 1996. Furthermore, these lands are part of the Fort Ord National Monument that was designated by the President in 2012. We appreciate the efforts of the Army in fulfilling their CERCLA obligations on these lands, and investigating a cleanup that supports the management of these lands as a National Monument.

Although the BLM has made available the transferred lands for public non-motorized use since 1996, this use has been restricted to a system of designated roads and trails that are signed on the ground for public use. There has been minimal public exposure to MEC, although occasionally public visitors have encountered munitions debris, inert training devices and numerous small arm casings. Working with the Army on safety measures, we have felt pretty comfortable that the casual recreation visitor that stays on our authorized transportation system is not in harm's way anywhere in the Area B regions. The open road and trail systems have been monitored over the years for munition hazards.

It is our understanding that sampling and investigations in some Area B regions suggest that MEC may be present off the road and trail systems, and in most cases, under heavy brush. This MEC poses a risk to our habitat workers who frequently work in these areas, and complicates the provisions of wildfire suppression. Because wildfire is a potential source of detonation, fire-fighters do not have the ability to work near a burning perimeter when vegetation is burning over areas suspected to have MEC on the surface. This greatly limits suppression options and can cause a normally easy wildfire to suppress, to grow uncontrollably in size.

In the Draft RI/FS, Areas B-2A and B-3 are tentatively selected for sites where there would be some additional technology aided subsurface clearance, and surface clearance. There are several trails in this region that BLM desires to reroute and/or restore. As such, the future transportation network in these regions may look quite different than what it is today. To transform this route network, we will need a MEC clean up sufficient to construct new trails and restore erosion features. We will work with you in the Work Plan phases to design that future route network.

Response to General Comment 1:

The Army appreciates the cooperation by and partnership with BLM in implementing safety precautions in the habitat reserve areas. These safety programs include MEC incident reporting system for addressing discovered items that resemble munitions, and MEC recognition and safety training for BLM workers. The Army is committed to developing remedial alternatives that will support management of the area by BLM as a habitat reserve and National Monument.

The Army and BLM have coordinated with CalFire who updated the Fire Suppression Plan for portions of BLM Area B which may contain MEC within the vegetated areas. Based on the coordinated plan, CalFire maintains the ability to respond to wildfires should they occur. As the RI/FS evaluation continues and response actions are implemented, the Army will provide updated information to BLM and CalFire.

During the Remedial Design/Remedial Action phase of the process, the Army will work with BLM so that remedial actions will be implemented in a manner that supports their efforts in developing a transportation network as part of the management of the property as a habitat reserve and the National Monument.

Document: Draft, Track 2 Remedial Investigation/Feasibility Study BLM

Area B and MRS-16, Former Fort Ord, California

Commenting Organization: Fort Ord Community Advisory Group

Name: Michael Weaver

Date of Comments: February 26, 2014

Comment 1

"First, the document offers a lot of information, some of it quite comprehensive regarding MEC, especially the Figures, Tables, and Appendixes. However, a big problem, as we see it, is the document appears to be a dumping ground for bunching up a lot of unknowns, and former patchwork clean-ups, on huge areas of former Fort Ord Real Estate. The beginning descriptive element of this draft gets bogged down, and leaves much that needs to be clarified or added to. The focus unfortunately appears to be justification for a recommendation for Land Use Controls for this "dumping ground" area or much of it. It needs a format change."

Response to Comment 1: This comment is noted. Please see responses below which clarify specific items noted in the comments.

Comment 2

"Cost estimates are appreciated, as it is taxpayer money. We would like to know how much money has been spent to date. Who can answer this question?"

Response to Comment 2: The Annual Report to Congress describes costs of environmental cleanup at Department of Defense (DoD) sites. According to the Report to Congress, for the Military Munitions Response Program (MMRP) at Fort Ord, the Army has spent \$235,142,000 through Fiscal Year 2012 (the most recent report available). This information is available to the public at the DoD Environment, Safety and Occupational Health Network and Information Exchange website, http://www.denix.osd.mil/arc/.

Comment 3

"What is needed by the reader is a Baseline. We are suggesting a format change for better analysis.

The quality of the previous cleanups and the methodologies of the previous cleanups has varied. A recommendation is that this document's introduction provides lists of the various areas in categories. Categories should include:

- 1) Those lacking recorded depths of MEC found
- 2) Those lacking recorded types and amounts of MEC found
- 3) Percentages of different areas scanned by magnetometers, for example 2%?, 10%?, etc.
- 4) A list of the different types of magnetometers used and their effectiveness in detecting MEC in various soil types found in the areas subject to this Draft.
- 5) Percentages of different areas tested for chemicals and pesticides. And what specific chemicals and pesticides were tested for.
- 6) Percentages of different areas tested for lead contamination, and lead dust.
- 7) An easy to read, side by side comparison of former OE designated areas, or other lettered and numbered designations with current MEC areas, and an explanation as to how and why boundaries and/or letters and numbers were changed.
- 8) A proposed Base Reuse Map clearly showing defined areas of development with the MEC areas in this document lightly drawn over it to assist in assessing risk, or nearby risk.

If some of the above is zero it should be stated. If some of the above will be forthcoming in another document it should be stated with an estimate for publication of the Draft."

Response to Comment 3: The requested information is provided in the Remedial Investigation/Feasibility Study (RI/FS). Specifically, the following information is provided here:

- A description of the work performed in each munitions response site (MRS) is provided in Sections 3.2 and 3.3. Depths were not recorded for the activities conducted prior to 1997. These activities included the work performed by HFA at MRS-09, MRS-12, and MRS-19; by UXB at MRS-10A, MRS-10B, MRS-12, MRS-14D, and MRS-21; and by CMS/USA at MRS-14D and portions of MRS-10A and MRS-19.
- 2. The types and amounts of munitions and explosives of concern (MEC) found were recorded for each MRS. This information is described in Sections 3.2 and 3.3 and is provided in the tables in Appendix A.
- 3. The percent of investigation for each sub-area is provided in Tables 4-8 and 4-9. These sampled acres include the grids investigated and the site walks conducted. To calculate the percentage for the site walks, it was assumed that the site walks covered a five-foot wide path.
- 4. The list of different types of magnetometers and their effectiveness are provided in Section 3.7.1.3.3.
- 5. The focus of the BLM Area B and MRS-16 RI/FS is munitions response. At Fort Ord, the potential for soil contamination has been evaluated through the initial Basewide RI/FS and later the Basewide Range Assessment program. These investigations included evaluation of munitions constituents in soil (including lead). Soil samples

were taken where appropriate, and if soil contamination was found, response actions have been conducted.

The Army has responded to similar comments from FOCAG, in a letter dated November 5, 2009, which is available in the Administrative Record (OTH-248). In that response, it was noted over 17,000 soil samples and over 29,000 water samples had been collected and analyzed as part of the investigation and cleanup of the former Fort Ord. Over 238 organic and inorganic elements had been identified as chemicals of potential concern and had been evaluated. Key reference documents that detail the background, rationale, results, and human and ecological risk assessment, were identified in the response.

The Army has previously responded to previous questions from FOCAG on pesticides (BW-2532 and BW-2557), and the Army's responses are available in the Administrative Record (BW-2540 and BW-2562). In summary, the potential presence of pesticides on the former Fort Ord has been thoroughly investigated as part of the Army's basewide remedial investigation activities. As part of the investigation, over 500 soil samples were evaluated for pesticides. Seven sites suspected of containing pesticide residue were identified and addressed through remediation or land use controls. Key reference documents that describe how the Army had addressed pesticide contamination throughout the cleanup of the former Fort Ord were provided in the response.

- 6. As described above, lead contamination was evaluated in the basewide RI/FS and through the Basewide Range Assessment program. All of the MRSs in BLM Area B and MRS-16 were recommended for no further action.
- 7. The "OE" designation was changed to the MRS designation in 2003 because of DoD terminology changes. No MRS boundaries have changed for this RI/FS. For BLM Area B sub-area B-6, the majority of the sub-area is MRS-14D and portions of MRS-14B and MRS-14D were included in the sub-area. Figure 3-5 identifies both MRS and sub-area boundaries.
- 8. As described in Section 2.1.3 of the RI/FS, BLM Area B and MRS-16 are designated as habitat reserve and a part of the Fort Ord National Monument. Designated development and habitat reserve areas within the former Fort Ord are described in

the Fort Ord Base Reuse Plan as well as Fort Ord Installation-wide Multispecies Habitat Management Plan.

Comment 4

"The FOCAG also has a few questions:

Latrines are mentioned as possible dumping grounds for munitions. Wouldn't any dumping of munitions in latrines likely be small arms ammunition? Would not larger ordnance be buried in burial pits approximately ten feet deep?"

Response to Comment 4: There is no indication of the burial of ordnance "in burial pits approximately ten feet deep." This type of burial would require large excavation equipment and there is no evidence in the historical photographs or field data of any large burial activities. As described in Section 3.6.1.2, the possibility of burial of unused items exists in the bivouac areas, but is considered unlikely. There is no evidence of small arms ammunition being disposed of in latrines to date. As described in Section 3.1.6, CMS/USA located and investigated 52 latrines throughout Fort Ord and no munitions items were found in the latrines in BLM Area B that were investigated.

Comment 5

"What is the status of the Habitat Conservation Plan? How might the burn plans change with its implementation?"

Response to Comment 5: The Habitat Conservation Plan is being prepared by Fort Ord Reuse Authority in coordination with recipients of former Fort Ord lands. It has not been published. It is not expected that the prescribed burns within BLM Area B (if the preferred alternatives are selected as part of the remedy) will be affected by the development of the Habitat Conservation Plan.

Comment 6

"Page 2-8 describes aquifer depths. No mention is made of the 900-ft aquifer Fort Ord is drawing its water from. Why?"

Response to Comment 6: The focus of this RI/FS is munitions response and a general hydrogeological discussion is included in the background section. Information has been added

to describe the Seaside Basin. However, the 900-foot aquifer is not affected by Fort Ord environmental cleanup program, and it does not affect munitions response actions or the evaluation of remedial alternatives for BLM Area B and MRS-16.

Comment 7

"Page 2-11 states the Army agreed to evaluate MEC at the former Fort Ord in an MR RI/FS consistent with CERCLA. However, no mention is made that this was the result of a settlement agreement following a lawsuit by a public interest group. Please provide a link to the terms of this settlement. Don't you agree this is important information?"

Response to Comment 7: It is not necessary to expand the text as suggested.

Comment 8

"Page 2-11, Please provide details as to specific changes in the FFA in order to accommodate ESCA. This is important information, don't you agree?"

Response to Comment 8: None of the property included in this RI/FS is subject to the Environmental Services Cooperative Agreement (ESCA). A brief description of the ESCA program is provided in Section 2.2.2 of the RI/FS.

Comment 9

"Approximately what percentage of unexploded ordnance explodes in the Army burns? At what depths?"

Response to Comment 9: There is no information to determine an approximate percent of MEC that explode during the prescribed burns.

Comment 10

"Where can one locate issues of the magazine published called the Fort Ord Panorama? Might not these provide details of Fort Ord's history and past training activities?"

Response to Comment 10: The Command History Office of Defense Language Institute Foreign Language Center and Presidio of Monterey maintains historical archives which includes the Fort Ord Panorama, the Fort Ord newspaper from 1940 to 1994. Archival materials can be viewed by appointment. Please see www.dliflc.edu/commandhistoryof.html for contact

information. These newspapers have been previously reviewed as part of historical record review for the environmental cleanup at the former Fort Ord.

Comment 11

"Summary:

Please understand we very much appreciate data provided in this document. However, it is incomplete as noted above, and needs to be re-formatted for better analysis."

Response to Comment 11: This comment is noted.

Appendix H

Response To Comments on the Draft Final Track 2 Remedial Investigation/Feasibility Study, BLM Area B and MRS-16, Former Fort Ord, California

Document: Draft Final, Track 2 Remedial Investigation/Feasibility Study

BLM Area B and MRS-16, Former Fort Ord, California

Commenting Organization: US Environmental Protection Agency

Name: Lewis Mitani

Date of Comments: July 1, 2014

General Comment 1

Evaluation of the Response to General Comment 2. The response adequately addresses the comment, but some issues remain with the response implementation in the revised version. The comment stated that, "There are a number of instances where the size of specific MRSs and sub-areas vary in different portions of the document. These include:

- BLM Area B is listed as 1,566 acres in Section 2.1.1, and as 1,529 acres in Table 3-1.
- MRS-16 is listed as 80 acres in Section 2.1.1 and Section 3.4.1, and as 81 acres in Table 3- 1.
- BLM East is listed as 138 acres in Section 3.2 (44 plus 94), and as 142 acres in Table 3-1.
- MRS-9 is listed as 7 acres in Section 3.3.1.1, and as 8 acres in Table 3-1.
- MRS-27G is listed as 4.3 acres in Section 3.3.12.1, and as 4 acres in Table 3-1.
- MRS-27J is listed as 20 acres in Section 3.3.14.1, and as 7.3 acres in Table 3-1.
- MRS-48 is listed as 28 acres in Section 3.3.7.1, and as 29 acres in Table 3-1.
- BLM Sub-area B-3 is listed as 687 acres in Section 3.6.2, and as 325.8 acres in Section 4.6.6. (NOTE: This may be a typographical error, as the sub-area under discussion in Section 4.6.6 is Sub-area B-4 and not B-3.)

It is understood that some of these inconsistencies may be due to some differences between the areas as originally described and the areas as evaluated later in the process. However, these differences should be explained in the narrative or in the table and the total acreages should be accounted for at each listing. Please correct these portions of the Draft RI/FS to make the numbers consistent or to provide an explanation of the inconsistencies."

The Army response reads, "Acreages in Table 3-1 are correct and the text will be corrected."

Following the release of the Draft RI/FS, BLM area B was expanded to include an area immediately north of BLM Area B and west of Barloy Canyon Road. This area is 31 acres and has been added to sub-area B-3."

While the response is acceptable, the following issues remain in the Draft Final version:

- BLM Area B is now listed as 1,597 acres in Section 2.1.1, and as 1,598 acres in Table 3-1.
- MRS-16 is now listed as approximately 81 acres in Section 2.1.1 and Table 3-1, and as approximately 80 acres in Section 3.1.8.2.
- MRS-27J is now listed as 7.3 acres in Section 3.3.14.1, and as 7 acres in Table 3-1.

Please correct these inconsistencies.

Response to General Comment 1

The referenced sections will be corrected to show acreages for BLM Area B as 1,597 acres in Table 3-1, MRS-16 as 81 acres throughout, and MRS-27J as 7 acres.

General Comment 2

Evaluation of the Response to Specific Comment 5: There are some minor issues with the response. The comment read: "Section 3.2.3.2, MRS-14D History of MR Investigations, Page 3-16: The last paragraph of this section refers to a "105mm projectile casing." It is unclear as to the identity of this item, as it may be an empty projectile body, or a cartridge case that was assembled to a 105mm projectile of unidentified type. As 105mm cartridges of different construction are fired by both 105mm guns and 105mm howitzers, this item may have been used by a tank or anti-aircraft gun, or by a field artillery howitzer. Please revise the noted description to clarify the identity of the item found."

The Army response reads, "The terminology has been revised to: "105mm projectile cartridge case, expended (model unknown)". For reference, four types of 105mm projectiles have been found at Fort Ord (as MEC and/or MD), all of which are used with field artillery howitzers:

- Projectile, 105mm, high explosive, M1
- Projectile, 105mm, illumination, M314 series
- Projectile, 105mm, smoke, M84 series
- Projectile, 105mm, target practice tracer, M67 series

While the Army response is generally correct, the fact that only 105mm howitzer projectiles have been recovered at the Former Fort Ord does not definitely prove that there is no possibility that 105mm gun ammunition was ever present or fired on the site. It would be helpful if the

source of the cartridge case were more precisely identified as a "105mm howitzer cartridge case, expended (model unknown)." Please make this change.

Response to General Comment 2

As noted in the comment, the MEC and MD items previously recovered at Fort Ord that can be identified as related to 105mm projectiles, and for which specific model were documented, were all related to the 105mm howitzer projectiles. It is likely that the cartridge case in question was from a 105mm howitzer projectile. However, there is insufficient documentation to definitively identify the specific cartridge case item as related to a howitzer projectile. Therefore, the description of the cartridge case item will remain unchanged.

General Comment 3

Evaluation of the Response to Specific Comment 10: The implementation of the response was not fully accomplished in the revision. The comment read, "Section 3.6.1.7, Subcaliber Artillery and Mortar Training, Page 3-41: The last sentence in this section states that, 'It is possible that duds could be presented downrange (Army, 1994b).' The word 'presented' should be changed to read 'present.' In addition, the word 'duds' should be replaced with the term 'unexploded projectiles.' Please make this correction in this section."

The Army response reads, "The terminology 'duds' has been revised to 'unexploded projectiles' and 'presented' has been revised to 'present."

While the word "presented" and "duds" have been changed as noted, the term "duds" and "dud" remain present in other portions of Section 3.6.1.7 and at other locations in the revision. Please replace the word "duds" and "dud" with "unexploded projectiles" or with "unexploded ordnance" as appropriate at all occurrences in the revised version.

(Note: The term "dud" is not defined or used in any of the eight volumes of DoD 6055.09-M [Department of Defense Ammunition and Explosives Safety Standards]. It is used four times in DoD 4145.26-M [Department of Defense Contractor's Safety Manual for Ammunition and Explosives], but only in reference to unexploded projectiles or bombs fired on a recovery field for testing purposes. It is not officially defined in this manual.)

Response to General Comment 3

All mention of the term "dud" or "duds" will be replaced in the document with "unexploded projectiles."

Document: Draft Final, Track 2 Remedial Investigation/Feasibility Study

BLM Area B and MRS-16, Former Fort Ord, California

Commenting Organization: Bureau of Land Management

Name: Eric Morgan

Date of Comments: July 1, 2014

Comment 1:

GENERAL COMMENTS AND PUBLIC ACCESS CONCERNS

We appreciate the information that was provided in the Draft Final RI/FS that discloses the history of previous MEC investigations because it is likely that most people in the community are under the incorrect assumption that MEC remediation was completed on the currently open National Monument lands prior to the transfer from the Army of 7,200 acres in 1996. The Draft Final RI/FS discloses what work has been done previously in select areas, and what was found during those investigations. By extension, the document discloses what type of MEC is likely to reside in certain areas based upon an analysis of this data.

The RI/FS accurately discloses that the National Monument lands in the Area B region are open to public, non-motorized use over designated (i.e. signed OPEN) roads and trails. Much of the region north of Eucalyptus Road within Area B is covered by dense central coast maritime chaparral (CMC) which provides some screening protection against public exposure to the MEC that is suspected to be on the surface and subsurface under the brush in some regions. The BLM has installed dozens of fence segments or brush barriers across openings in the brush to discourage visitors from wandering off-trail. Once brush is removed by burning and/or cutting in the proposed remediation sub-regions, we are concerned whether recreational visitors will remain on the designated route system. We would like to work with the Army on developing/implementing measures to keep visitors on the designated route system in order to avoid public exposure to surface and subsurface MEC that will become more accessible once the brush is removed.

Although not disclosed within the Draft Final RI/FS, it is likely that MEC remediation in the Area B region will involve measures to restrict public use and access in certain areas during the duration of the work. We would assume that these measures may include restricting all non-cleanup personnel and the public during active cleanup operations from the prescribed fragmentation risk zone of the suspected munition. The restrictions also may include restricting

public use from certain areas during off-hours (and weekends) if the public cannot be prevented from entering areas where MEC could be exposed following vegetation removal.

Road and trail restrictions to the north of the National Monument related to MEC cleanup of Fort Ord Reuse Authority (FORA) lands under the Environmental Services Cooperative Agreement (ESCA) is already testing the patience of the recreational visitors. As such, the BLM would like to work closely on public use restrictions on the National Monument in order to minimize the recreational impacts. The Area B region contains some extremely popular recreation trails such as Trail 59 (i.e. Blair Witch Trail), Trail 61 (i.e. Burmese Trail), Trail 62 (i.e. Gail Trail or Chain Gang Trail), Trail 69, Trail 56, etc. The BLM estimates that around 350,000 annual visits are spent on the trail systems of the Fort Ord National Monument. Most of the trail use is by hikers/joggers (67%), followed by mountain bikers.

There are some who have made comments to the BLM that any MEC that is under the brush does not present a risk to the public or workers because no one enters these areas. The BLM does not support that proposition. MEC located within and underneath brush has, on occasion, been encountered by BLM staff working in those regions or seen by the public. When this occurs, Army officials are contacted and the MEC item is removed or detonated in place. Furthermore, when there is a wildfire, firefighters are at an increased risk if MEC is detonated by the wildfire that they are trying to contain. Finally, there have been a few, rare occasions that members of the public have cut in illegal trails for recreational use and unknowingly put themselves at risk when they did so.

Response to Comment 1:

The Army will work with the BLM on developing/implementing measures to keep visitors on the designated route system in order to avoid public exposure to surface and subsurface MEC that may become more accessible once the vegetation is removed.

As noted in the BLM comment above, onsite MEC removals under Alternatives 3 and 4 would require temporary restriction of public use during vegetation clearance and MEC removals. The Army will work closely with the BLM on public use restrictions in the National Monument to minimize the recreational impact of any MEC remedial actions in BLM Area B.

In developing the RI/FS, current and future uses of BLM Area B under BLM management were considered, and remedial alternatives were developed and evaluated to support the anticipated land use. A range of anticipated future use scenarios were evaluated, including firefighters responding to wildfires and BLM staff conducting habitat management. The Army's preferred

alternatives described in Section 5.6 would mitigate risks from MEC that may be present in the vegetation, away from the designated roads and trails.

Comment 2:

FUEL BREAK/CONTROL LINE AND TRANSPORTATION SYSTEM COMMENTS

The Draft Final RI/FS presents some conceptual ideas on where brush might be removed by cutting and/or burning in Appendix D. The BLM appreciates that the Army is considering the use of prescribed fire as a method to remove CMC that covers some of the suspected investigation regions. The regenerative value of prescribed fire on the rare plant components of CMC has been well documented in the annual monitoring reports the Army has prepared for work in the fenced range areas. One key to conducting controlled burns is to have sufficient primary, secondary and tertiary fuel breaks/control lines around the perimeter of the burn regions.

The BLM manages and maintains several designated fuel breaks that would need to be improved in order to effectively serve as primary, secondary or tertiary control points. The BLM would like to work with Army prescribed fire planners on the adequacy of the secondary and tertiary control lines that normally are a minimum width of 15' drivable (gravel or pavement) lanes with 15' of vegetation cutting on each side of the road. The BLM recognizes that the primary control lines immediately surrounding the burn units (i.e. where cutting is conducted) is generally much wider because fire personnel need to work outside the prescribed fragmentation risk zone of the suspected munitions that might detonate during the burning.

The condition of primary, secondary and tertiary fuel break roads is also of concern to the BLM. While some of the potential controlled burn polygons have adjacent paved roads that are in a good condition (i.e. Parker Flats Road), others are natural surfaced roads (i.e. W. Machine Gun Flats Road) that are greatly deficient in supporting the amount of vehicle travel that occurs during the duration of a prescribed burn and subsequent MEC remediation. There is major road work needed in the proposed burn unit B region.

Response to Comment 2:

If the preferred alternatives were selected as the remedy, the Army will work with the BLM in the production of subsequent work plans to address the adequacy of primary, secondary and tertiary containment lines and fuel break roadway for prescribed burning in BLM Area B. As

stated earlier, the Army will work closely with the BLM on temporary public use restrictions during vegetation clearance and MEC removals.

Comment 3:

AREA B-3 COMMENTS

Area B-3 covers an expansive region where vegetation removal is proposed to support MEC removals. This region contains numerous Habitat Management Plan (HMP) species, including Monterey spineflower and adjacent vernal pools and upland habitat that support California tiger salamander. Remediation will need to comply with the terms and conditions of your U.S. Fish and Wildlife Service Biological Opinion. For purposes of considering the use of prescribed burning as a method to remove vegetation, the Army delineated polygons A, B and C within Appendix D for Area B-3.

Polygon A (Area B-3) is the largest of all three proposed controlled burn areas. This polygon is encircled by segments of Watkins Gate Road, Henneken's Ranch Road and West Machine Gun Flats Road. This polygon encompasses authorized trails numbered 59, 65, 66, and 69. Due to resource and erosion concerns, several segments of authorized trail in the region need to be rerouted and/or stabilized in coordination with the MEC remediation. Short sections of fence that currently prohibit the public from entering brush openings will likely be damaged or removed to support the remediation and BLM will need to work with the Army on methods to restrict public entry across open areas.

Polygon B (Area B-3) is the most erosive of all the potential proposed burn areas. This polygon is encircled by segments of Eucalyptus Road, Parker Flats Road, West Machine Gun Flats Road, Trail 94, Little Moab Road and Trail 92. Several of these roads require considerable improvement. This polygon encompasses authorized trails numbered 91, 92, and 93. Due to resource and erosion concerns, several segments of authorized trail in the region need to be rerouted and/or stabilized in coordination with the MEC remediation. Furthermore, there are numerous gully's and erosion scars that require attention in concert with the remediation. These erosion sources will likely be greatly acerbated by vegetation removal required to support the remediation and should be stabilized concurrently.

Polygon C (Area B-3) is the smallest of all the potential proposed burn areas. This polygon is encircled by segments of Parker Flats Road, Watkins Spur Road and Watkins Gate Road. This polygon encompasses trail 70 that needs to be rerouted and/or stabilized in coordination with the MEC remediation. Short sections of fence that currently prohibit the public from entering

brush openings will likely be damaged or removed to support the remediation and BLM will need to work with the Army on methods to restrict public entry across open areas.

There are other portions of Area B-3 that are proposed for cutting CMC to aid with the remediation. This includes a sizable CMC region east of Addington Road. If there are any opportunities to safely and economically prescribe burn even small patches of standing and/or cut vegetation in this region, the BLM would be supportive. Where areas cannot be burned, the BLM recommends leaving uncut remnants of obligate seeders (i.e. Monterey manzanita) standing as a source of seed dispersal. The technique was used in the East Garrison South habitat reserve during remediation and seems an appropriate technique for other unburned areas.

Response to Comment 3:

Onsite MEC removals and associated vegetation clearance actions are included in Alternatives 3 and 4. The Army will coordinate with the BLM concerning the reroute and/or stabilization of authorized trails. Alternatives 3 and 4 would be implemented in a manner that incorporates habitat conservation, management, mitigation and monitoring requirements outlined in *Installation-Wide Multispecies Habitat Management Plan* (HMP) for Fort Ord, as well as the U.S. Fish and Wildlife Service (USFWS) Biological Opinions or as specifically coordinated with USFWS and the BLM.

Comment 4:

AREA B-2A COMMENTS

This is a sizable region of CMC that is proposed for cutting and encompasses multiple restoration sites, historic weed treatment polygons, and segments of Trail 61 and Trail 62. Numerous roads, gullies and hardstand areas were ripped, reshaped and planted in 2012 in order to restore healthy CMC and minimize erosion that was damaging Barloy Canyon Road. This is another region where it will be challenging to keep recreation visitors from wandering off-trail into open areas once brush is removed. If there are any opportunities to safely and economically prescribe burn even small patches of standing and/or cut vegetation in this region, the BLM would be supportive. Where areas cannot be burned, the BLM recommends leaving uncut remnants of obligate seeders (i.e. Monterey manzanita) standing as a source of seed dispersal.

Response to Comment 4:

The preferred method for vegetation removal in CMC habitat is prescribed burning. In the FS, the Army has considered prescribed burning in all BLM Area B sub-areas containing CMC. The use of mechanical/manual cutting was assumed for BLM Area B sub-area B-2A because the small size of the area and the lack of existing fuel break roads at the perimeter make it difficult to conduct a successful prescribed burn. Where areas cannot be burned, the Army will implement appropriate measures to retain suitable obligate seeders as a source of future seed dispersal during workplan development.

Document: Draft Review, Track 2 Remedial Investigation/Feasibility

Study BLM Area B and MRS-16, Former Fort Ord, California

Commenting Organization: Fort Ord Community Advisory Group

Name: Michael Weaver

Date of Comments: July 3, 2014

"The FOCAG has reviewed the referenced document, specifically the responses to our previous questions and concerns that we submitted for the Draft. Respectfully, we don't feel we received very good answers, especially to our comments that have been labeled #4, #5, and #9. These are found in Section G

Please review and respond to our further comments and questions.

(FOCAG) Comment 4

"The FOCAG also has a few questions:

Latrines are mentioned as possible dumping grounds for munitions. Wouldn't any dumping of munitions in latrines likely be small arms ammunition? Would not larger ordnance be buried in burial pits approximately ten feet deep?"

Response to Comment 4: There is no indication of the burial of ordnance "in burial pits approximately ten feet deep." This type of burial would require large excavation equipment and there is no evidence in the historical photographs or field data of any large burial activities. As described in Section 3.6.1.2, the possibility of burial of unused items exists in the bivouac areas, but is considered unlikely. There is no evidence of small arms ammunition being disposed of in latrines to date. As described in Section 3.1.6, CMS/USA located and investigated 52 latrines throughout Fort Ord and no munitions items were found in the latrines in BLM Area B that were investigated.

Mike Weaver further comments and questions:

The large excavation equipment used were bulldozers. These looked like the same Army bulldozers that created and maintained yearly firebreaks around portions of the perimeter of the former Fort Ord Army Base. These bulldozers were also kept on base to assist with putting out occasional accidental fires that started in the dry grass during Army training maneuvers.

I was an eyewitness to this as well as an eyewitness to the burial pits on much of which is now BLM land. I have described this in several meetings with Army representatives. I grew up and lived nearby. Additionally Cub Scouts visited the Army base. Army bulldozers would scoop earth out of an area to a depth of approximately ten feet.

Ordnance and debris left over from maneuver exercises would be pushed in, and then covered up. The area would be smoothed over and then abandoned.

Army bulldozers were sometimes left in areas being used for Army maneuvers.

No, I did not take photographs. It was common knowledge.

Why is the Army denying that deep burial pits were a common practice on former Fort Rod?"

Response to Comment 4:

As part of the Site Evaluation presented in Section 3.7 and in the worksheets in Appendix C, evidence of burial of munitions items are considered as part of the literature review and the evaluation of previous work. The preferred alternatives presented in the Draft Final BLM Area B and MRS-16 RI/FS are evaluated to be protective of human health and the environment with relation to potential surface and subsurface receptors.

(FOCAG) Comment 5

"What is the status of the Habitat Conservation Plan? How might the burn plan change with its implementation?"

Response to Comment 5: The Habitat Conservation Plan is being prepared by Fort Ord Reuse Authority in coordination with recipients of former Fort Ord lands. It has not been published. It is not expected that the prescribed burns within BLM Area B (if the preferred alternatives are selected as part of the remedy) will be affected by the development of the Habitat Conservation Plan.

FOCAG further comments and questions:

We understand an HCP Administrative Draft is being circulated among State Agencies and Departments. Our question is, what is the estimated date this document will be made available to the public for review?

Although you state you currently "don't expect" that prescribed burns will be affected, you won't know until State Agencies, State Departments and the public has an opportunity to evaluate and comment on a proposed Habitat Conservation Plan.

Is BRAC currently reviewing the Administrative Draft?

Is the Department of Defense currently reviewing the Administrative Draft?

Is BLM currently reviewing the Administrative Draft?

Please provide a comprehensive list of who is reviewing the HCP Administrative Draft.

Why has this document taken so long?

Response to Comment 5:

The Habitat Conservation Plan (HCP) is being prepared by Fort Ord Reuse Authority in coordination with recipients of former Fort Ord lands. Please contact Fort Ord Reuse Authority for information about the HCP. The website of U.S. Fish & Wildlife Service (USFWS) (http://www.fws.gov/endangered/what-we-do/hcp-overview.html) provides: "Habitat Conservation Plans under Section 10(a)(1)(B) of the [federal Endangered Species] Act provide for partnerships with non-federal parties to conserve the ecosystems upon which listed species depend, ultimately contributing to their recovery." Section 10 of the federal Endangered Species Act applies to non-federal entities. The Army has completed its endangered species consultation with USFWS under Section 7 of the Act, which applies to federal agencies.

Comment 9:

"Approximately what percentage of unexploded ordnance explodes in the Army burns? At what depths?"

Response to Comment 9: There is no information to determine an approximate percent of MEC that explode during the prescribed burns."

"FOCAG further comments and questions:

The following is quoted from Eric Morgan of BLM in a letter regarding prescribed burns.

Here is quote from a portion of the letter:

'Because wildfire is a potential source of detonation, firefighters do not have the ability to work near a burning perimeter when vegetation is burning over areas suspected to have MEC on the surface. This greatly limits suppression options and can cause a normally easy wildfire to suppress, to grow uncontrollably in size.'

"The FOCAG finds that it is common knowledge that unexploded ordnance can and does explode with heat, especially the intense heat of prescribed burns. It is not credible to state that there is 'no information to determine an approximate per cent of MEC that explodes during prescribed burns."

"This 'no information' statement does a disservice to the intelligence gathering of our Department of Defense."

"The FOCAG asked for an approximate percentage. We will rephrase the question to be:

Of the ordnance, training munitions, and flares known to have been used on former Fort Ord over the decades, we understand about 10% did not go off.

- 1) Of this 10% of unexploded munitions, which types detonate with heat, and at what temperature?
- 2) What is the distance range these various munitions can travel after being detonated by heat?
- 3) What depths does the heat penetrate?"

Response to Comment 9:

The Army considers the possibility that some unexploded ordnance on or near the surface may detonate during the burning of vegetation as part of a MEC removal action. If alternatives 3 or 4 are selected, the munition with the greatest fragmentation distance or most probable munition will be determined and the associated maximum fragmentation distance will be calculated to determine exclusion zones and safety procedures in accordance with Department of Defense Explosives Safety Board and Department of the Army guidance. This information will be provided in future work plans for areas where burning of vegetation is appropriate and a viable option for vegetation clearance.

Appendix I

Response To Comments on the Final Track 2 Remedial Investigation/Feasibility Study, BLM Area B and MRS-16, Former Fort Ord, California

Document: Draft Proposed Plan, BLM Area B and MRS-16, Former Fort

Ord, California

Commenting Organization: California EPA Department of Toxic Substances Control

Name: Ed Walker

Date of Comments: November 12, 2014

The Department of Toxic Substances Control (DTSC) has reviewed the Draft Proposed Plan and has the following comments:

Comment 1:

The Proposed Plan presents a significant amount of detail and it is recommended that a fact sheet be developed to summarize the Proposed Plan. There are a significant amount of acronyms used. From a public prospective DTSC recommends limiting the use of acronyms. Please provide email addresses for regulatory representatives in the Proposed Plan.

Response to Comment 1:

A fact sheet that would accompany the Proposed Plan will be developed and provided for agency review.

The acronyms in the Proposed Plan will be reviewed, and extraneous acronyms will be removed to increase readability.

Email addresses for the regulatory representatives will be included in the Proposed Plan.

Comment 2:

During review of the draft Proposed Plan for BLM Area B DTSC became concerned with the recommended alternative of Land Use Controls (LUCs) only for sub-area B-2. Our concern is that this area did not receive a significant amount of surface removal and it is going to be open for recreational use of roads and trails with only vegetation to serve as a barrier between the site users and munitions and explosives of concern (MEC) that is acknowledged to reside in the area. Our concern is that it has not been established that the vegetation serves as an adequate deterrent to access to areas off of the roads and trails and it is possible that site users will be exposed to MEC acknowledged in the Remedial Investigation / Feasibility Study (RI/FS) to exist on the surface.

This caused DTSC to do additional detailed research into the Fort Ord Risk Assessment (RA) and the analysis of the acknowledged hazards in Sub-area B-2, and we believe we

found an error in the use of the RA that may have caused an incorrect remedial alternative to be selected for this Sub-area. The following is an explanation of this potential error:

- DTSC believes that the correct result of the RA for Sub-area B-2 is "E" and "E" for both surface and subsurface MEC. Not the lesser score of "D" for surface and "E" for subsurface as is shown in the summary of RA results in the Table in Section 4.6.9 of the RI/FS Report.
- DTSC arrived at this conclusion concerning the "E" overall risk score for Sub-area B-2 through the following process:
- Table 4-15 shows the "Overall MEC Risk Score" for both surface and subsurface Type 2 MEC as "E" and "E". Review of the individual scoring factors shows that this overall risk score is supported by the individual scoring worksheets and is correct.
- Table 4-16 correctly shows the "MEC Baseline Risk Analysis for Sub-area B-2 to be "E" and "E" for both surface and subsurface.
- Therefore, DTSC believes that the correct score of "E" for surface MEC was incorrectly transposed into the summary Table in Section 4.6.9 as "D" and that this incorrect score was used during the evaluation of remedial alternatives.
- Additional evidence that the incorrect RA score of "D" was used for surface MEC in Subarea B-2 is in Section 4.6.2 which incorrectly reiterates the final RA score of "D" for surface MEC.

DTSC understands that the RA is a qualitative indication of risk and that other conditions or circumstances can be used to modify the impact of a severe hazard score of "E". In fact, this is done in the RI/FS for Sub-areas 4 and 5 in Sections 4.6.6 and 4.6.7 which provide support for modifying the severe "E" scores that these Sub-areas received. No such modifying support is provided for Sub-area B-2 in RI/FS Section 4.6.2 which reiterates the incorrect score of "D" for surface MEC.

Response to Comment 2:

The risk assessment was reviewed, and the Overall MEC Risk score for surface receptors in sub-area B-2 is "D." Based on the review it has been confirmed that MEC Hazard Type 2 items were not found on the surface, therefore, the overall risk score of "D" for MEC Hazard Type 1 is used as the final score for surface receptors. No MEC Hazard Type 3 items have been found in sub-area B-2.

Additional inaccuracies were discovered during the review. The number of MEC items indicated in Tables 4-8 and 4-9 are incorrect for sub-area B-2, and the MEC density have been recalculated. In addition, the overall risk score for surface receptors in sub-area B-5 is

"D" rather than "E." The RI/FS will be amended and change pages will be submitted to correct the text and tables.

Sub-area B-2 includes a large portion of MRS-10B and a portion of MRS-27J in the south. MRS-10 was indicated from interviews in the Archive Search Report as being an area where the former fire chief remembered soldiers firing shoulder-launched projectiles and rifle grenades toward the cliff faces and in canyons. Because of the size of the area, the ASR split the site into MRS-10A and MRS-10B. A one-foot removal was conducted in 286 grids the northern portion of MRS-10B. Sampling was conducted in 58 100x200 foot grids (equivalent to 116 100x100 foot grids) in the remainder of MRS-10B. The UXO items discovered in in the portion of MRS-10B that is included in sub-area B-2 are listed in the table below. In addition, 15 MD items were located and 109 pounds of MD were located. This list is taken from Appendix A, Table A-3c.

			Risk_	MM_	
MRS	Grid	MM Item Description	Code	Type	Quantity
	LC3-MA10-	Fuze, grenade, igniting, M201			
MRS-10B	SH09		1	UXO	1 1
	LC4-MA01-	Signal, illumination, ground,			
MRS-10B	SJ08	M126 series	2	UXO	1

One additional MEC item was reported in sub-area B-2 as an incidental item found by BLM in May 2000.

MRS	Grid	MM Item Description	Risk_ Code	MM_ Type	Quantity
	LC3-MC10-	Fuze, grenade, hand, practice,			
MRS-10B	SA03	M205 series	1	UXO	1

In 2011 and 2012, BLM used heavy equipment to restore old Army roads and associated gullies and compacted soil areas within 12 acres of sub-area B-2, with no incidental munitions items reported.

The findings for MRS-10B, as reported by the After Action Report (USA, 2001), recommended further investigation for the portion of MRS-10B near MRS-19 and MRS-48. This area has been included in sub-area B-2A that is recommended for Alternative 3, Technology-Aided Surface MEC Remediation, with Subsurface MEC Remediation in Selected Areas, and Land Use Controls.

Surface removal was not conducted in the portion of MRS-10B that is included in sub-area B-2 due to limited MEC/MD items having been recovered during SiteStats/GridStats (SS/GS) sampling. The result of the Remedial Investigation identifies that sub-area B-2 was used for bivouac and maneuver training. It is acknowledged that the SS/GS sampling program statistically estimates the ordnance density of a site as the grid investigation

proceeds, and not all of the detected anomalies are intrusively investigated. As discussed in Section 3.7.2.2.3 of the RI/FS, U.S. Environmental Protection Agency conducted a statistical review in 2000 and identified several concerns regarding the assumptions and design of the SS/GS methodology. Because of this knowledge, the output from the SS/GS (density estimate) was not used in the RI/FS. The data from anomaly investigations and distribution of the investigated grids were evaluated. In characterizing sub-area B-2 the results of MEC removals conducted in adjacent MRS-10A were also considered. Along the boundary (eastern portion of MRS-10A), projectile items were not found during the removal action. The majority of MEC/MD items recovered from this portion constituted practice and pyrotechnic items. As described above, the risk assessment is based on conservative assumptions and provided an Overall MEC Risk Score of "D" for surface receptors and "E" for subsurface receptors. Given the historical training uses, investigation history and items found, MEC is possible to be present, although surface receptor exposure is unlikely. The types of MEC that may be present would be practice and/or pyrotechnic types that are not designed to cause injury. Given the compilation of the available information for the area, the Overall MEC Risk Score is considered an overestimate.

Comment 3:

DTSC believes that opening an area for recreational use that received a maximum RA score of "E" for surface MEC is inappropriate with only LUCs and vegetation preventing access to the MEC hazards. This is also inconsistent with other areas that received a significant amount of surface removal which was used to modify their "E" RA score. In light of this, discussions and reconsideration of the selected remedial alternative for Sub-area B-2 is necessary before DTSC can concur with the Proposed Plan for BLM Area B.

Response to Comment 3:

As described in response to comment 2, the results of the Remedial Investigation shows that sub-area B-2 was used for bivouac and maneuver training. The initially-suspected shoulder-launched projectiles and rifle grenade training was not supported by the field investigation results: no MEC or MD related to rockets or rifle grenades (practice or high explosive) have been found with sub-area B-2. The use of smoke rifle grenade in maneuver training, which was acceptable for the period, could be observed as "firing towards cliffs and canyons" by a bystander not familiar with maneuver training protocols or the munitions involved. However, evidence does not support the use other types (HE, WP) rifle grenades in this area. The field investigation results from the MRS-10 complex indicate no evidence of 37mm and mortar projectiles within sub-area B-2. The overall risk score of "D" for surface receptors in sub-area B-2 is considered an overestimate because: (1) vegetation clearance was achieved by prescribed burning, which cleared a larger footprint than the sampling grids; (2) no surface MEC item was recovered from the sampling investigation; (3) no munitions item was identified during BLM's habitat restoration and trail maintenance activities in 2011 and 2012; and (4) the MEC density calculations are based

on small numbers of items (total three MEC items) providing an upper-bound density for the site.

Accordingly, the Feasibility Study describes that the remaining risk can be adequately managed by Alternative 2, Land Use Controls. This will include MEC safety and awareness training, construction support (two UXO-qualified technicians), and public education.

As part of the review based on the DTSC comments, the evaluation of remedial alternatives in the Feasibility Study was also reviewed. Although vegetation can be a barrier to access in some areas, it is not the reason for recommending LUCs for sub-area B-2. As noted in Section 2.1.3.3 of the RI/FS, only land management consistent with the conservation of biological resources will be conducted in the property, and recreational access will be allowed on established routes. This information was considered in the Feasibility Study. If selected as part of the remedy, implementation of LUCs will be described in further detail in a LUC Implementation Remedial Design/Remedial Action Work Plan. The Army anticipates that certain level of flexibility would be required in developing the implementation plan to reflect the possible changes to community access patterns and management preferences by the BLM. The effectiveness of the LUCs would be periodically reviewed, and any recommendations or modifications to the program would be coordinated with the BLM and the regulatory agencies.
