¹

A qualitative estimate of abundance is based on the total number of California linderiella observed from 10 to 20 random samples (depending on size and complexity of each waterbody) collected with a dipnet from throughout each pool.

Abundance is defined as follows:

"--" : None observed.

Low: 1 to 10 linderiella observed.

Moderate: 11 to 100 linderiella observed.

High: 101 to 300 linderiella observed.

Very high: more than 300 linderiella observed.

IM: immature only observed, not identifiable to species.

NS : Not surveyed.

NR : Survey not required.
