Site Maps and MRS-16 MMRP Database

Appendix B

The following plate and table present information generated during various investigations and removal activities performed at munitions response site (MRS-16). The investigations included:

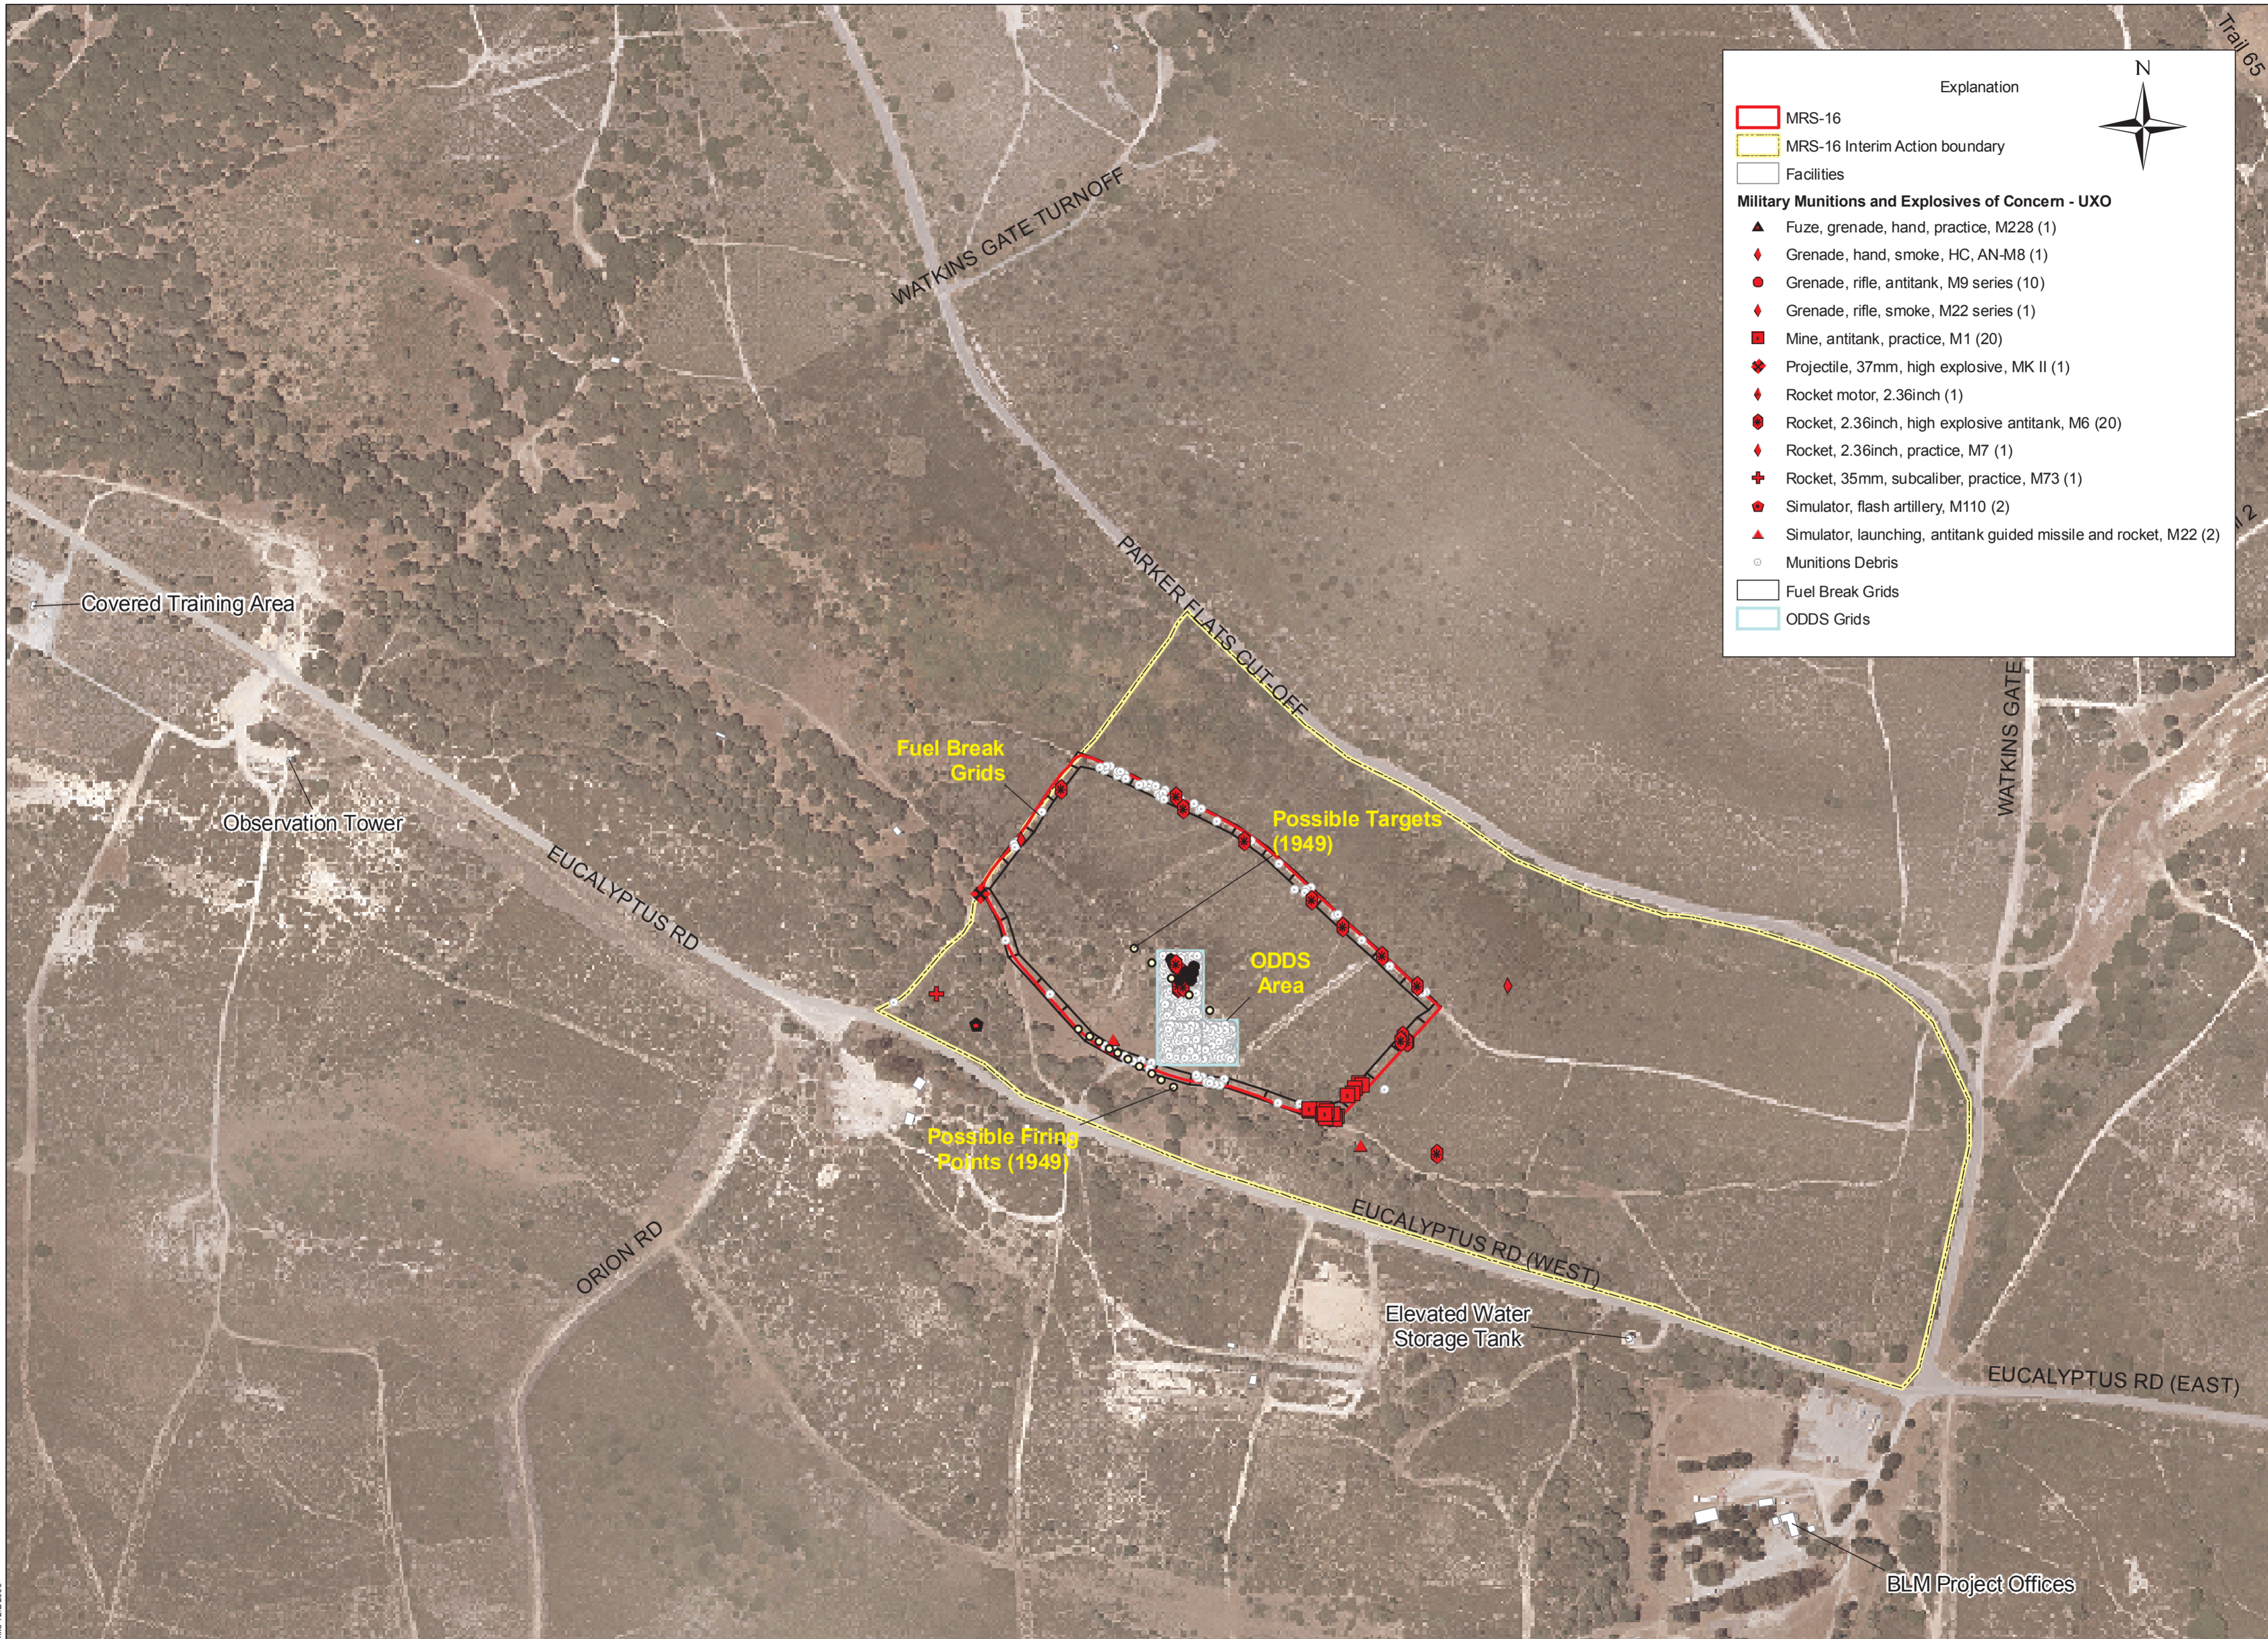

1998 - removal to a depth of four feet within contiguous 30- by 110-foot grids comprising the footprint of a fuel break along the perimeter of MRS-16

2001 - investigation of four 100- by 100-foot grids as part of the Field Trial Sites phase of the Ordnance Detection and Discrimination Study (ODDS) and

2002 - Time Critical Removal Action (TCRA) of surface MEC in accessible areas as the first phase of implementing the interim action (IA) at the site.

In 1991, a clearance was performed by the Army resulting in the discovery of approximately 1,000 rockets. Details of the clearance were not available for incorporation into the information provided here.

Plate B1 is generated from the military munitions response programs (MMRP) database and shows the site boundary for MRS-16, as well as the boundary representing the extent of the area related to the prescribed burn operation, also referred to as the MRS-16 interim action boundary. Also included on this plate are pertinent features such as locations of potential former firing points and targets, investigation grids, munitions and explosives of concern (MEC) items, and munitions debris (MD) items. Appendix B, Table 1-1 summarizes the MEC and MD items discovered during the various investigation activities at the site.
